TKM	Turkmenistan
UZB	Republic of Uzbekistan

Foreword

It is indeed a matter of great pleasure to launch this flagship document titled “Leveraging Economic Potential of ECO Region”, addressing such an imperative issue of trade inherently essential for socio-economic sustainable development of the region. Because of its huge significance, this theme has been a matter of perennial interest and an indispensable part of all Summits, Ministerial and Experts, business meetings, conferences, etc. Justifiably so, it is based on well-entrenched perception of immense potential of trade, strong economic fundamentals and overridingly complementarities of trade, which are, inter alia, bedrocks of trade among states. Nonetheless, trade among ECO fellow countries is below double digit, which is a matter of real concern for its leadership, policy makers and public at large.

This document provides in-depth analysis of intra-regional, inter-regional trade, examining its constituents while discussing various related issues macroscopically as well as microscopically for five-year period, 2014-2018. It finally unearths its potential of trade amongst members by utilizing 2018, latest available data, in aggregated and disaggregated manner in three-steps, more amenable for all. Bilateral exports and imports among states have been arranged in matrices as well for better analysis and inference. In a way, it has status as well as estimation parts.

The over-arching result of this document is that this Region has at least 10 folds potential to increase trade among its member countries. The analysis reveals that almost in all major trade sectors, each country has potential to enhance bilateral trade. It is heartening to share that the Central Asian Region Republic in the region are economically more interdependent, with high intra-regional trade of with 28 percent, over 3.5 times high compared with the region's overall respective figure of 8.1 percent. It also finds out that Regional products have economic presence in almost all economic blocs around the world with varying levels. ECO has performed better than SAARC, close to GCC but lags behind the success stories of ASEAN, EU and NAFTA.

This exhaustive work brings out many pieces of good news. It may be of note that 8.1 percent intra-regional trade is the result of bilateral arrangements of ECO member states against its ten (10) times potential. Member states thus need to implement multilateral regional agreement on trade for materialization of its full capacity.

Indubitably, it is a fascinating theme but limited work especially in consolidated form is available for the ECO region, barring some econometric research work for professional audience. ECO undertook this daunting task and importantly in a more explicable method for its wider readership. Special gratitude is due to Mr. Muhammad Safdar, In-charge Trade and Investment, who undertook the challenging task, worked resolutely and completed this flagship publication, within timeframe, adding value by using his brilliant ideas, analytical skills and ingenuity.

The publication is the first ever document in the organization's annals detailing and discovering extent of potential with huge data and intricate statistical workings and more appealingly with more understandable methodology. The forthcoming 24th ECO Council of Ministers Meeting has added to its meaningfulness to help the Honourable Ministers, to make the informed decisions on the basis of present realities and challenges. Last but not least, upcoming Meeting of ECO's Ministers of Economy soon in Tajikistan is important addressee of this document. It will be of use for them in devising plans to tap huge potential of the region. In the end, constant support and interest of the esteemed Member States is greatly appreciated as without their cooperation, publication of this document would not have been a reality.

Dr. Hadi Soleimanpour
Secretary General

Acknowledgments

"Leveraging Economic Potential of ECO Region" is a pioneering publication of the organization on the subject and an initiative of the Directorate of Trade and Investment. This publication presents ECO's state of regional trade, bilateral relations of its member states as well as ECO's and its member states external trade relations with prominent regional and international trade blocs leading to work out product-wise potential of trade of the whole region and its member states.

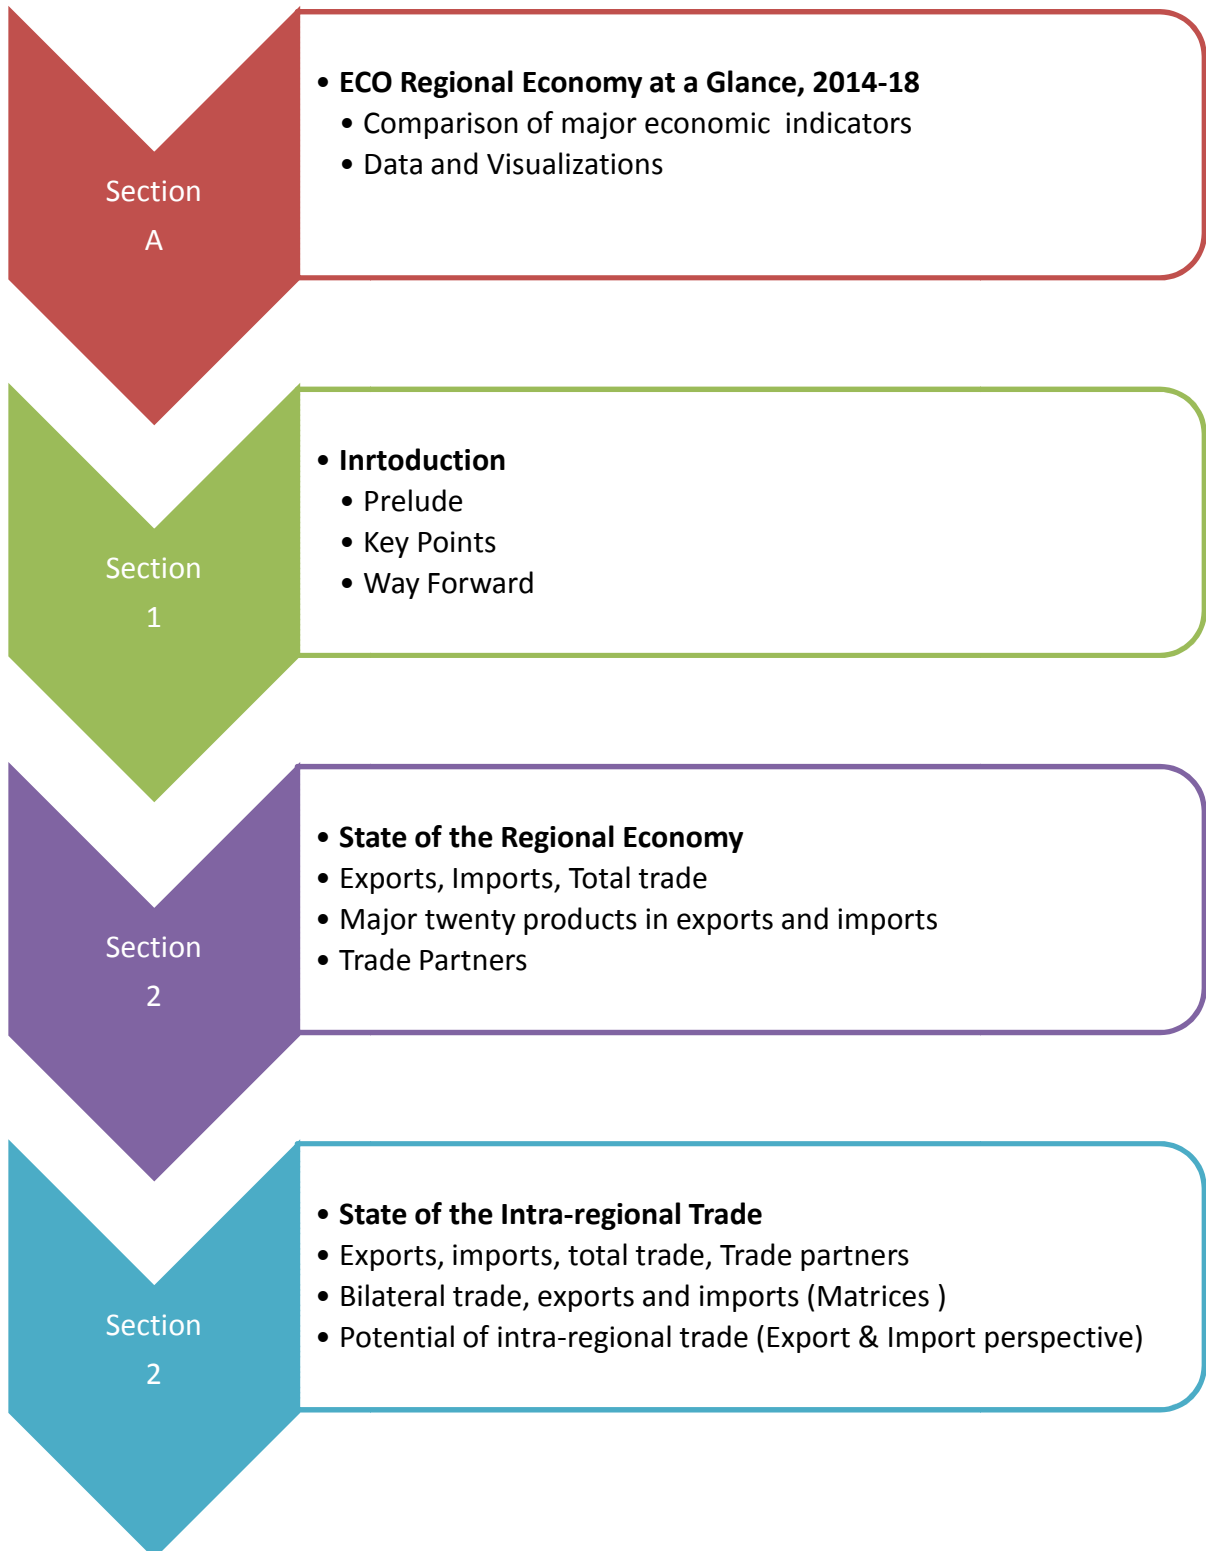

This document is based on the statistical time series data principally for the period, 2014-2018, collected from multiple sources, mainly from secondary data from reliable international sources of UN system such as UNCTAD/ ITC, etc. and reported with references appropriately. Data has been taken for all trade aggregates such as exports, imports, trade deficit, etc. for the member states in major twenty products and estimation has been made on the figures reported therein. Inference of trade potential is also based on these data. However, for few variables reported in preliminary section, data from the World Bank Group was extracted for assessing the Region's and member states performance and analyzing other related aspects.

It merits mentioning that SESRIC and World Bank data were also consulted for the reliability and consistency of the estimates. Issues wherever appeared, in few countries' cases, have been mentioned in the discussion. However, suggestions to improve it are welcome. ECO profoundly appreciates UNCTAD/ITC and the World Bank data without which this mammoth task was an elusive goal. Besides, some Country Reports of the World Bank Group, International Monetary Fund (IMF), and websites of SESRIC of OIC, ASEAN and SAARC have been consulted to avoid any major variation in reporting the value of economic indicators /statistics and make report accurate and reliable to the extent possible. ECO-CCI and Iranian National Committee of ECO-CCI Reports on Trade Potential of the Region have also been greatly benefitted while preparing this report. Profound acknowledgement and thanks are also due to these esteemed organizations.

I am profoundly grateful to Excellency Dr. Hadi Soleimanpour, Secretary General, for his vision, able guidance, unflinching commitment and passion for regional integration. His constant interest has been a driving force behind this document, and I am intellectually indebted to him. Special thanks are due to Dr. Sayed Yahya Akhlaqi, Deputy Secretary General, for creating conducive atmosphere to complete this task and also for his kind and generous support. I would deeply appreciate Mr. Kanan Nazarov, Deputy Secretary General, for his persistent interest, warm encouragement and constructive comments to complete this immense task. I deeply acknowledge working and discussions, especially on trade data, with Dr. Mohammad Adnan, former Director Trade and Investment at the Secretariat, which have been very productive and useful in preparation of this publication. Discussions with Mr. Memduh Unal, Director (AIT) have been insightful, productive and enlightening while preparing this document and all professional matters. I am deeply grateful to Mr. Waqar Siddique, Data Base Officer, who has been indeed supportive and encouraging in completion of this responsibility. Mr. Mohammad Akbar Azizi has been greatly helpful in painstaking job of combining this huge document and giving it a professional look. Lastly, it would be fair to acknowledge Mr. Morteza Abdollahi for his patience and dedication in publishing this document.

Muhammad Safdar
In-charge Trade and Investment

Leveraging Economic Potential of the ECO Region
(Trade Focused)
Document Map

Section
3

- **Inter-Regional Trade**

- ECO trade with 15 major trade blocs
- State of trade balance and its sources
- Comparison of blocs (share in global GDP and Intra-regional trade)
- Collating intra-regional and inter-regional trade

Section
4

- **Potential of Import from ECO Region**

- ECO, non-ECO imports in top 20 products, each country
- Percentage of ECO imports of products, each country
- Country's capacity to import from the region
- Product-wise Region's export capacity for each country
- Region's overall capacity to export

Section
5

- **ECO Potential to Export among Member States**

- Each Country's Trade profile, exports and imports, major products, and Trade Partners
- Potential of each country, product-wise, to export to other ECO member states in major 20 product groups

Trade Balance, Deficit (-)	-33,162	-17,151	-	-
Intra-Regional Trade	70,859	65,378	6.26	-

¹ This document covers last five years picture, 2014-2018; however, some analysis has been made for 2000-2018 for long term trend. Trade Potential of the region has been worked out for 2018 and for Afghanistan for 2016 has also been computed.

² Compound Average Growth Rate (CAGR) has been computed for the period, commencing from 2014 to 2018.

Note: Data for Population, GDP, FDI, etc extracted from the World Bank and reported in this document. Trade data for 2018 has been used for over 95 percent of the calculations. For 2018, data is still being updated by the source UNCTAD/ITC Trade map. Current data for some member states includes direct as well as mirror data like Turkmenistan, Uzbekistan in some years. UNCTAD/ITC Trade map data and the World Bank Data are almost same with little variation, generally less than 5 percent. Data on trade aggregates i.e. exports and imports for Afghanistan for 2018 have substantial difference. Disaggregated data for Afghanistan for 2017 is not available. Year 2016 has disaggregated data which has been used in many places such as Potential in Exports Section. However, as for all member states 2018 aggregated data has been employed, for Afghanistan aggregated data for 2018 has been used as well. Overall, it will not undermine the quality of regional estimates. When Afghanistan data will be updated, it will be adjusted accordingly, if required. Note on Data given in the end of the document may be consulted with regard to this and footnotes in subsequent sections where Afghanistan has been discussed may be useful.

Composition of Exports and Imports (% share) in 2018		Exports	Imports
• Primary Goods		52	32
• Manufactured Goods		46	62
• Others		2	6

Member State Economy's share in Region's Real GDP (Constant 2010 USD), 2014-2018			
Member State	2014	2018	Percentage Share
• Afghanistan	0.94	0.86	Decreased
• Azerbaijan	2.79	2.36	Decreased
• Iran	23.25	21.91	Decreased
• Kazakhstan	8.86	8.38	Decreased
• Kyrgyz Republic	0.28	0.28	Constant
• Pakistan	9.92	10.43	Increased
• Tajikistan	0.36	0.40	Increased
• Turkey	49.35	50.80	Increased
• Turkmenistan	1.68	1.84	Increased
• Uzbekistan	2.57	2.74	Increased

Rent of Natural Resources³

Total Natural Resources Rent (% of GDP)	Years					
	2000	2005	2010	2014	2015	2017
• Afghanistan	0.38	0.38	0.59	0.50	0.48	0.69
• Azerbaijan	33.94	37.64	32.19	23.08	14.61	21.02
• Iran	32.71	34.96	23.35	27.22	16.14	17.78
• Kazakhstan	26.68	30.05	24.44	18.42	10.83	16.19
• Kyrgyz Republic	1.12	4.13	11.28	7.38	7.14	8.45
• Pakistan	1.47	2.45	1.99	2.19	1.32	1.05
• Tajikistan	0.45	0.67	1.37	1.86	2.35	5.69
• Turkey	0.24	0.28	0.54	0.42	0.31	0.36
• Turkmenistan	71.20	53.90	30.47	24.14	18.19	17.42
• Uzbekistan	16.41	23.25	21.14	15.84	10.72	14.69

Source: <https://databank.worldbank.org/source/world-development-indicators#>, latest available data is for 2017.

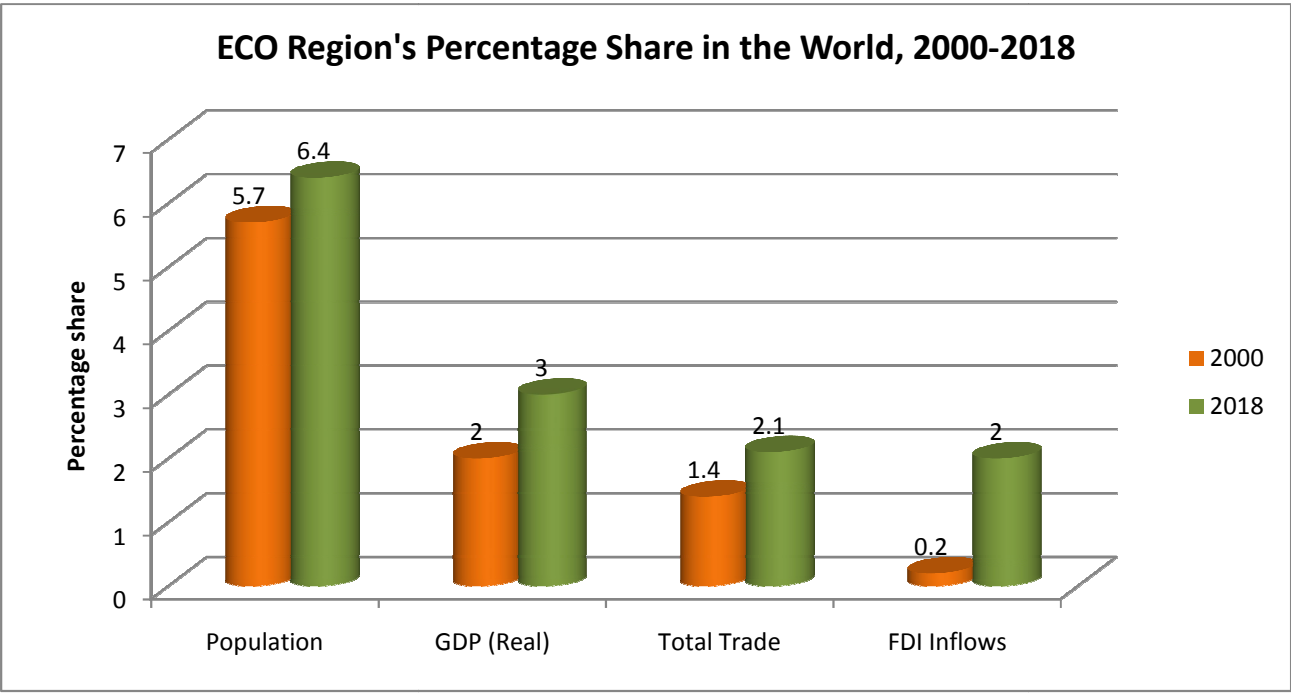

³As per World Bank definition, total natural resources rents are the sum of oil rents, natural gas rents, coal rents (hard and soft), mineral rents, and forest rents. Accounting for the contribution of natural resources to economic output is important in building an analytical framework for sustainable development. In some countries earnings from natural resources, especially from fossil fuels and minerals, account for a sizable share of GDP, and much of these earnings come in the form of economic rents - revenues above the cost of extracting the resources. Over last five years, there has been modest decline in its share in GDP implying that other sectors are capturing share and economy is moving towards diversification which is an encouraging phenomenon for the economies as well as for the region.

The region is rich in fossil fuel and mineral resources. However, during 2000 to 2018, dependence on natural resources has hugely dropped in all of the member states in a gradual but distinctive manner, resulting from the government policies, also reflecting their commitment for diversification of the economies. Other sectors are capturing the share released by natural resources.

B. Some Visualizations

Visualizations of few key economic indicators of ECO Region are presented below for orientation and better understanding of discourse in the subsequent sections.

Graph-A

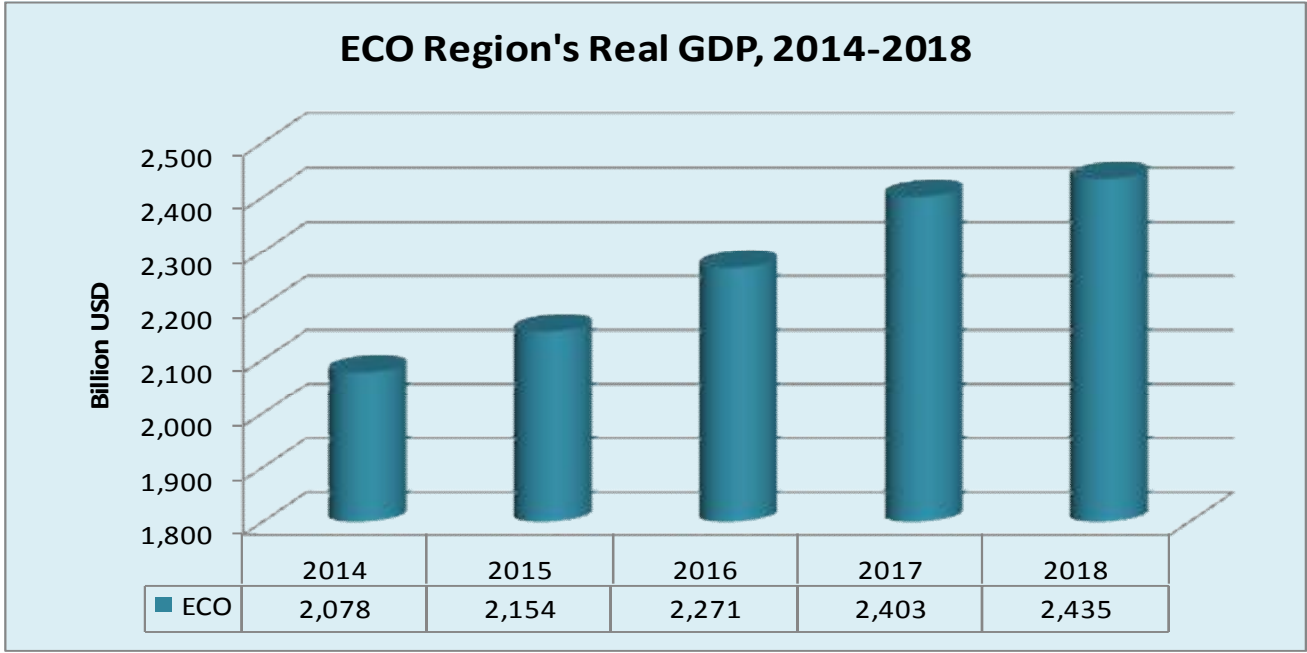

Source: Calculations based on World Bank data and UNCTAD/ITC Trade map data.

Graph-A illustrates that ECO's region's share in the global population increased from is 5.7 percent in 2000 to 6.4 percent in 2018, up by 12.3 percent whereas its contribution to global GDP is 3 percent gradually improved from 2 percent in 2000 to 3 percent in 2018, 33 percent increase which is quite encouraging and healthy sign but still the region can capture more share with accelerated economic growth. In the same manner, ECO region's total trade share in world trade increased from 1.4 percent in 2000 to 2.1 percent in 2018, marked increase by 50 percent. As compared to share in real GDP, addition in trade is more visible and pronounced. Share of ECO region's FDI inflows increased 10 times from 0.2 percent in 2000 to 2 percent in 2018, remarkable increase by ten (10) times in last 18 years. Addition in share in real GDP and total trade can be substantially attributed to huge increase in investment in the region.

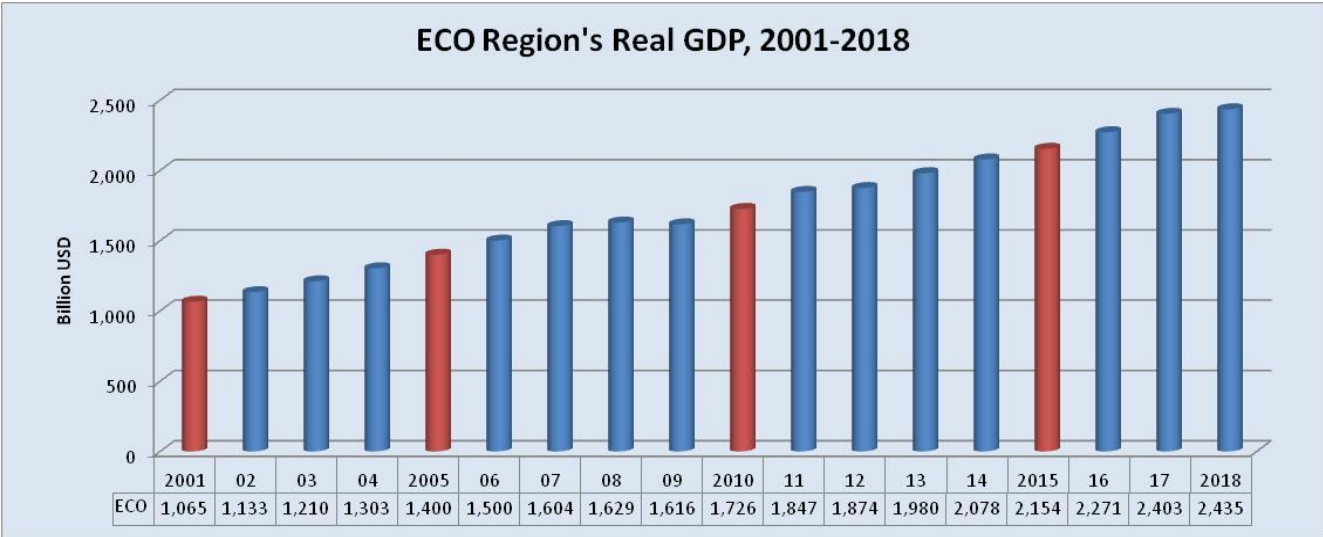

Graph-B: As a result of better performance, ECO region's real GDP has touched USD 2.4 trillion in 2018 compared with 2.0 trillion in 2014 showing an improvement by 20 percent in five years at per annum growth of 4.04 percent. This level of economic growth is respectable in the wake of global economic slowdown and better than the world average during these years. There has been marginal improvement from 2017 to 2018 because some member states faced challenges which affected the overall results of the region.

Graph-B

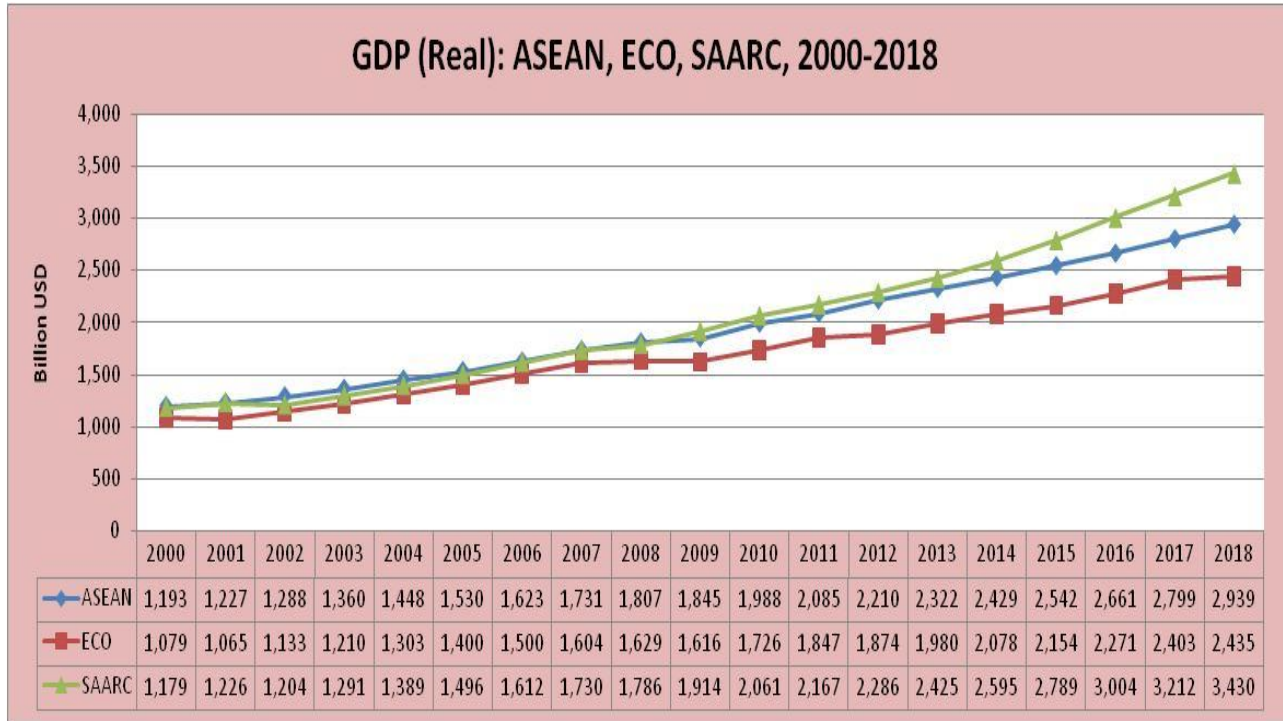

Source: Working based on data extracted from <https://databank.worldbank.org/source/world-development-indicators#>

Graph-C:

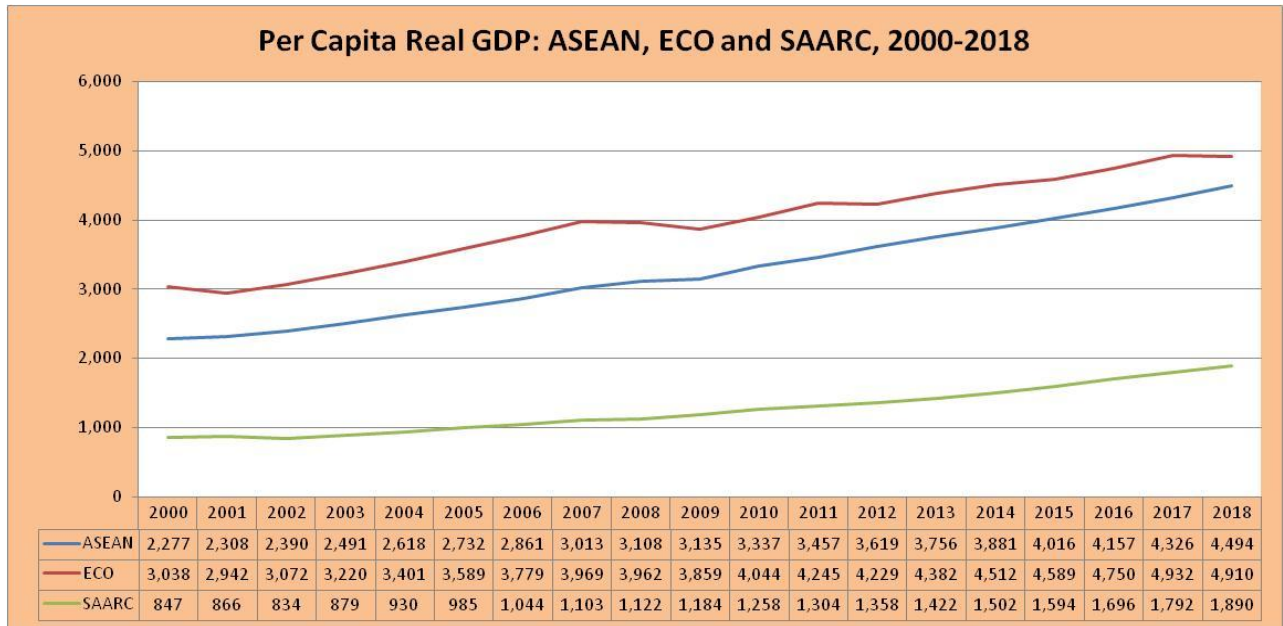

Source: Working based on data extracted from <https://databank.worldbank.org/source/world-development-indicators#>

Graph-D

Source: Working based on data extracted from <https://databank.worldbank.org/source/world-development-indicators#>

Graph-E

Source: Working based on data extracted from <https://databank.worldbank.org/source/world-development-indicators#>

Graph-C exhibits that real GDP during 2000-2018, indicating incremental change which took place on year on year basis manifesting growth trajectory of the ECO region.

Graph-D: A comparison of ASEAN, ECO and SAARC regional blocs shows that real GDP of three trade blocs was almost the same in 2000 but in 2018, SAARC's real GDP is the highest at USD 3.4 trillion followed by ASEAN's at USD 2.9 trillion and ECO at USD 2.4 trillion in 2018.

Graph-E: On count of per capita real GDP, ECO has noticeably performed better than SAARC, by 2.6 times higher and moderately than ASEAN, 10 percent up, which is gratifying to note.

Graph-F: It is clear from this Visualization that total trade dropped in 2015 and gradually picked up with 806 billion in 2018, slightly less than 809 billion in 2014. So is the case with its components, exports and imports. ECO region in all five years is net importer by small margin.

Table B: Major ten exports and imports are enumerated signifying that the region is the biggest exporter of the fossil fuel resources (oil and gas), vehicles, iron and steel, machinery, Petro-chemical products, minerals, textiles and agricultural products. Interestingly, the region' biggest import is also fossil fuel resources, followed by machinery, iron and steel, chemical and pharmaceutical products. Surprisingly, exports and imports of the region have common products implying that complementarities of trade exist in the region. Exports and imports seem to be concentrated and need more diversification for sustainable growth perspective.

Table-C: ECO top ten Trade Partners in Exports and Imports in 2018 show that in case of exports major exports go the Asia, not elsewhere specified, followed by China, Italy, Germany, Iraq, UK,USA, France, Netherland and Russian Federation. Thus, among top ten partners, major import markets of ECO products are European. In case of imports, China and Russia are followed by Germany, UAE, USA, Italy, India, Korea and Iran, which is also an ECO member state. Ostensibly, imports are more diversified in terms of partners.

Section-1
Introduction

1. Introduction

Regionalism is a reality of our time with promising benefits. Success stories of regionalism across the continents have established that dividends of cooperation are immense and profound, and many regions made enviable progress, inter alia, on the back of it. Through enhanced cooperation, economic growth picks up, trade flourishes and the region along with its constituents prosper together leading to elevated living standards. ECO region is no exception to this widely accepted and pervasive phenomenon.

Incontestably, the ECO Region is blessed with natural, physical, economic and social capital. In combination with skilled human resource, it can translate abundant natural resources especially fossil fuel and minerals, into value added products and export within the region and beyond at the level much higher. Also, utilizing region's special strengths and by graduating level of collaboration in the areas of trade and investment will yield mutual benefits to participating nations and collectively to the region. It will help continue the process of diversification of economies and their transformations, under way in most of the economies of the region at varied pace, to make them more resilient to buffer in the precarious economic conditions and withstand the detrimental effects of flux in global economy.

Global economy⁴ is currently passing through a challenging phase, emanating from tariff escalation by some major world partners. As a result of this, uncertainty is prevailing which may lead to slowing down prospects of economic growth world-wide, affecting countries and regions at varying scale depending on their economic structures and bases of their economies. Nevertheless, such situations provide a chance to countries and regions to assess its deficient areas in policy and action, lead to activate inner strengths converting such phenomenon into opportunities but certainly with national and regional plan to face its associated threats and deflect its ill-effects.

Justifiably, national priorities transcend regional and global plans; nonetheless, elevating altitude of cooperation and according regional priorities a special and significant place in national plans will strengthen the countries in the region economically and stabilize the region as a whole, creating enabling environment for economic growth and reducing poverty. Trade is a major driver of economic growth and vital for sustained socio-economic development of the national and regional economies. It is, among others, one of the priority areas of the organization and stipulated in the ECO Vision 2025.

In this backdrop, the report aims to explore state of the trade in the ECO region using secondary data for last five years, 2014-2018; more precisely, to ascertain level of intra-regional and

⁴ "Mounting trade tensions, an increase in trade-restrictive measures and continuing economic uncertainty created real challenges for world trade in 2018. These factors and a deceleration in overall economic activity slowed momentum in global trade, restricting merchandise trade growth to 3 per cent compared with 4.6 per cent in 2017. This downward trend is expected to continue in 2019.", Director-General Roberto Azevêdo in WTO Annual Report 2019.

inter-regional trade. In this backdrop, it plans to estimate the region's capacity to export to its member countries and also finds out capacity of the member states to import from the region. This in-depth analysis employs aggregated, disaggregated and three-tier methods and presents products-wise and country-wise estimates for trade potential in exports and imports, separately.

The document has been organized in six Sections. Section one offers Introduction entailing salient findings of the investigative work. Section two presents regional and intra-regional trade explaining regional and its constituents' total trade, exports and imports, and presents product-wise and partners' analysis. It mainly uncovers bilateral trade relations among member countries and organizes all bilateral trade into matrices. It also evaluates intra-regional trade and maps its product-wise potential for the region in exports and imports. Section three explains economic relations with other major economic blocs and regions and provides concise comparison with 15 major economic blocs.

Section four explores Region's capacity to export to its member states and works out trade potential by employing three methods. It also works out region's well as countries' capacity to import from the region. Section five explores member countries potential to export and expand bilateral trade country-wise and products-wise and finds out bilateral trade potential. In sum, this document provides internal as well as external economic relations of ECO and its member states with prominent regional and international bodies and finally and more importantly maps its potential to expand these relations through enhanced intra-regional trade. The estimates are based on aggregated, disaggregated and three-step method and reach the same results speaking of consistency and reliability of its estimates.

Some Key points of the Report are summarized as under:

- i. In 2018, the cumulative world trade of the ten ECO countries reached US\$ 806 billion, moderately up by 6 percent in relation with 2017 which included exports of US\$ 394 billion and imports of US\$ 412 billion, thus the region being net importer by slight margin. Over last, five years, percentage of trade aggregates such as exports and imports are similar. However, combined trade of 10 member states has not reached the level of 2014 when total trade of the region touched USD 71 billion. Trade slumped in 2015 stemming from dwindling prices of natural resources, however, gradually picked up in the following years.
- ii. ECO intra-ECO trade was found USD 65 billion, accounting for 8.1 percent of the total ECO trade. Surprisingly, the Central Asian Republics (CAR)'s overall intra-regional trade is significantly high at 28 percent, almost 3.5 times of intra-regional trade of the region, which is in fact comforting to note, implying that the inner circle of the region is much more integrated. Inter-temporal comparison reveals that intra-regional trade has edged up to 28 percent in 2018 from 26.2 percent in 2014, which too is a sign of improvement.
- iii. Inter-regional comparison with peer economic groupings on the yardstick of 'intra-regional

trade' manifests that ECO region falls in the middle as ECO region's intra regional trade of 8.1 percent is less than ASEAN and MERCOSUR which is 23 and 14 percent respectively, however, better than SAARC and COMESA, each 6 percent; thus, ECO stands in the middle with opportunities to graduate in the upper echelon.

- iv. CAR's level of integration at 28 percent with its members is comparable with ASEAN and some extent possibly with highly developed regional economic blocs like NAFTA (39.94), EU (61.40), APEC (69.79), etc.
- v. Individually some economies of Central Asia are much more integrated; Tajikistan exports over 80 percent of its total exports to its ECO member states. Strikingly, there is substantial variation from extraordinarily 80 percent for Tajikistan to 8.67 percent for Kazakhstan. In case of imports, some countries in the CAR are integrated as high as 35.31 percent for Turkmenistan and Tajikistan 32.12 percent from the regional partners.
- vi. It appears that geographic proximity, historical linkages are also a reality along with market forces and complementarities of trade which define economic engagement of the national economies and determine the patterns of trade.
- vii. Afghanistan's exports and imports in the ECO region are 54 percent and 61 percent showing high level of integration like Tajikistan. Bilateral partner's comparison is more intriguing.
- viii. Four bigger economies of the region, namely, Turkey, Iran, Pakistan and Kazakhstan which include three coastal economies of the region, namely, Turkey, Iran and Pakistan, are more integrated in volume of trade terms, but are less integrated in terms of trade percentage.
- ix. ECO's inter-regional trade with other blocs presents a mixed picture; trade surplus with high income and industrialized economies, inter-governmental organizations, like G-7, OECD and more pronouncedly with EU with surplus of over USD 28 billion and Europe is the biggest importer of ECO region's products. With OIC, CARICOM, Middle East, etc, the region is also in surplus. Conversely, for other economic blocs/regions such as APEC, NAFTA, BSEC, BRICS, EAEU, Developing-8, GCC, APTA, MERCOSUR, along with Russian Federation and China, big trade partners, is in deficit and net importer of merchandize products.
- x. Estimates of indicator "Region's Capacity to Export to member states" are organized into three groups; Group-1 contains that show that for four economies namely, Turkey, Iran, and Pakistan and Kazakhstan, region's capacity to these economies are less than ten times, with 1, 3, 5, and 9 times respectively, in line with the size of the economy and the import structures, also in the same order of the size of the economies from highest to the lowest with their respective shares of 50.8, 21.91, 10.43 and 8.38 in real GDP in 2018.
- xi. Likewise, Group-2, countries having the value of the indicator in the range of 10-50, includes Afghanistan, Azerbaijan and Uzbekistan with 20, 30 and 18 times respectively. Analogously, Group-3 (capacity over 50 times) includes Kyrgyz Republic, Tajikistan and Turkmenistan with 71 times, 100 times and 121 times values respectively. Largely, extra-ordinary variation in

capacity of the region to export to the member states originates from the size of the economies which too have immense difference.

- xii. Bilateral trade chart shows that all countries are engaged in trade with almost all of the rest of the ECO region, however, for understandable reasons; their level of economic relation is partly matches with the size of the economies.
- xiii. The upshot of this comprehensive and detailed work is that indicative potential of the region in major 20 products, which constitute 83 percent of its total imports, is 10 times implying that the member states can on average increase trade with the fellow member countries at least by 10 times. Estimated potential by other method shows that bilateral trade among members can be enhanced by 11 times. These results are in line with PIDE's⁵ study estimating that the ECO region has intra-regional trade potential by 8 folds. Nevertheless, utilization of trade potential is an intricate process depending upon host of factors such as country's preferences, demand structures, availability of type of resources, developmental needs, etc.

Thus, from the foregoing discussion, it emerges that the existing value of intra-regional trade is 8.1 percent, which is the result of bilateral arrangements of ECO member states. However, the potential is at least ten (10) times more signifying that the region needs to implement multilateral regional agreement on trade and trade related issues to materialize its full capacity. Hence, trade agreement will accelerate the process of regional integration and will bring prosperity through enhanced intra-regional trade as has been witnessed in other regional blocs.

Way Forward

Considering the proximate reasons of un-utilization of vast potential, it can be suggested that gradual trade liberalization measures in the form of implementation of ECO Trade Agreement (Preferential or Free Trade), Agreement on Promotion Protection of Investments (APPI), more trade and visa facilitation, trade promotional arrangements, enhanced customs cooperation and conducive environment for doing business may work effectively.

Also, better and strong transport and communication linkages among the member states will make trade commercially viable and attractive with its regional partners. These measures will provide a solid foundation for stepping-up volume of trade in the region through market creation and trade diversion from non-ECO partners and allure investment making the regional value mechanism a reality. However, all these measures can be taken with greater political will, sustained interest of the member states and by enhancing institutional capacities to achieve the objective of regional integration and prosperity in the region.

⁵Pakistan Institute of Development Economics (PIDE) carried out a detailed study on "Patterns of Trade in ECO Region" in 2011 and inferred, inter alia, that intra-regional trade among member states can be enhanced eight (8) times.

With more consideration to regional perspective, member countries will be able to optimally harness the trade potential existing in the region, face the challenges of trade liberalization, adequately address cross-cutting concerns in the climate change and environment spheres, move towards realization of the Sustainable Development Goals (SDGs) at the global level, accomplish regional targets, inter alia, doubling intra-regional trade stipulated in the ECO Vision-2025, and achieve inclusive and socio-economic sustainable development in the region taking in to account progressive technological advancement.

Section-2

State of Regional and Intra-Regional Trade

2. State of Regional and Intra-Regional Trade

ECO has registered impressive economic growth in last two decades or so and international trade has been instrumental in achieving high growth rates especially in the resource-based economies. As the region has plentiful economic resources, its exports and imports are largely based on natural resources, which is evident from rent of natural resources data reported in the snapshot of the regional economy. As noted, reliance on natural resources is also declining over years and member states exporting energy and minerals are moving towards diversification which is an appreciable development. This section primarily aims to assess state of intra-regional trade in the ECO region, however, will briefly touch state of the overall trade of the region, providing a solid setting for an in-depth appraisal of intra-regional trade. The last part of this section will ascertain potential of intra-regional trade by aggregated method.

2.1 State of Trade in the ECO Region, 2014-2018

Trade is important reflection of the economy and it is considered one of the major drivers of economic growth in all parts of the world. ECO region, inter alia, on the back of trade has made outstanding progress, and five countries have already graduated to higher middle-income group. The rest are endeavoring to follow suit.

Before moving forward, first combined picture of the ECO region in total trade presented.

2.1.1 Aggregated Picture

Graph-1

A close look at the **Graph 1 and Tables 1-3** reveal that total trade, sum of exports and imports of all member states, in the region dropped in 2015 and gradually picked up at the level of 806 billion in 2018, marginally less than 809 billion noted in 2014. Tumbling oil prices in the post-2012 period and economic slowdown in major economies of the world, like China, US, and Europe which are our trade important export and import partners, are among the proximate causes of the drop in exports of the member states as well the region. Imports also followed similar trend, however, on average it had less variation in its magnitude. Also, to note that ECO region in all five years is net importer by small margin, more visible and pronounced in 2015, later the trade gap in exports and imports contracted. Member states have individual paths/trends in exports and imports depending upon, inter alia, nature of exports and imports of the economies.

Table 1: ECO Region's Total Trade, 2014-2018

Member States	Year-wise Exported and imported Value in thousand USD				
	2014	2015	2016	2017	2018
ECO	809,430,415	650,527,023	643,360,609	760,212,251	806,498,934

2.1.2 Disaggregated analysis

First top twenty product groups in exports and imports are given during last 5 years, 2014-2018 followed by trade partners in exports and imports. In other words, supplying markets and importing markets are given. A look at **Table-4 and 5** manifest that main product of export and import for the whole ECO region is same i.e. energy because half of the ECO member states economies are energy exporting economies as well as other half are importing it. ECO region is exporting 36.48 percent of energy while it is importing 16.28 percent, over 55 percent less imports than exports. Same statement is also valid for other main trade items such as iron and steel, plastic, machinery, agriculture products, etc. It may be noted that the volume and share of energy in exports and imports dropped from 2014 to 2018. However, exports of vehicles and iron and steel witnessed a visible increase. In case of imports, share of machinery is high but its value is close in 2014 and 2018.

Fascinatingly, although demand and supply of aggregated regional economy constitute same product groups, and the member states are neighbors, intra-region trade is low, which is a matter of real concern and needs to be addressed appropriately.

Table-4: Exports (Major Twenty Product Groups), 2014-2018

HS Code	Products	Years, Figures in thousand USD					Percentage in 2018

2.1.3 ECO Trade Partners

ECO Region is strategically located in the neighborhood of China, Europe, Russia and Gulf Countries. Main trade partner of the region is China. Share of trade with China is more than even each other members of ECO. Iran is the tenth of the main suppliers of the Region and it mainly stems from energy sector; its trade does not need any specification. On the other hand, US is not the neighbor of the region, yet its share of trade with the ECO is high. Trade partners like Italy, Germany, France, Netherland, Spain etc from EU have high volume of trade which has been discussed at length in the subsequent section on Inter-Regional Trade section of the document.

Europe is the biggest partner in our exports. It is plainly ascertainable that ECO trade has presence in all continents but strikingly high with EU, G-7, OECD countries and Russia and China.

Table-6: ECO Exports, List of Supplying Markets of ECO for the Total (All Products)

2.2 State of Intra-regional Trade

Expansion of intra-regional trade is one of the primary goals of the creation of the organization with its promised role in economic growth and the socio-economic sustainable development in the region. It occupies central place in the main documents of the ECO like Treaty of Izmir, and ECO Vision 2025. In view of this, enhancement of intra-regional is one of the strategic goals of the ECO Vision and efforts are geared towards this aim for its potential benefits ushering an era of prosperity for the people of the region. There is sufficient and convincing evidence that intra-regional trade grew significantly in almost all the economic blocs/economic groupings across the continents. Before moving further on this theme, it is imperative to take stock of the current state of trade among member states economy and investigate intra-regional trade.

Intra-regional trade of the ECO region and its ten (10) member states is presented in the following discussion; first in aggregated form followed by disaggregated form i.e. exports and imports. Product-wise analysis of its constituent is arranged in the ensuing discussion. The discussion also outlines bilateral trade of the member states in exports and imports separately and their share in the international as well as in the regional trade. For convenience and ready reference, intra-regional trade percentage share of the member states with each other, pair wise, has been organized in four matrices.

2.2.1 Aggregated picture

Table-10 transpires that total volume of intra-regional trade during 2014-2018 has been the highest at USD 70.86 billion in 2014, followed a steep fall in 2015 and 2016 at the USD 56.59 and USD 54.20 billion respectively. It picked up moderately in 2017 and 2018 at USD 60.12 billion and USD 64.59 billion respectively. It is ascertainable from the front row of the **Table-10** that total intra-region trade has still not gained the level of 2014 and still struggling to reach that level. Incidentally, the case of total trade of the region is similar. It may be of note that decline in the post 2014 emanated from the falling oil prices in post-2012 period and more visibly in resource-based economies exporting oil and gas, which gradually recovered from such market shock.

The other contributing factor has been global economic slowdown prevailing during the period and such trend was noted in the macro-economic aggregates of all the regions; ECO was not exception to this phenomenon. Thus, apart from other factors, oil prices were relatively high in the years when volume of intra-regional trade was noted high and vice versa; it was further observed more pronounced in economies which relied more on hydrocarbon and mineral exports. As trend in the ECO's total regional trade is in line with the rest of the world and as a consequence, percentage of intra-regional trade did not see substantial variation.

Unsurprisingly, there has, however, been slight change in the composition in these years and for the individual economies, depending upon level of reliance on natural resources. It is useful to

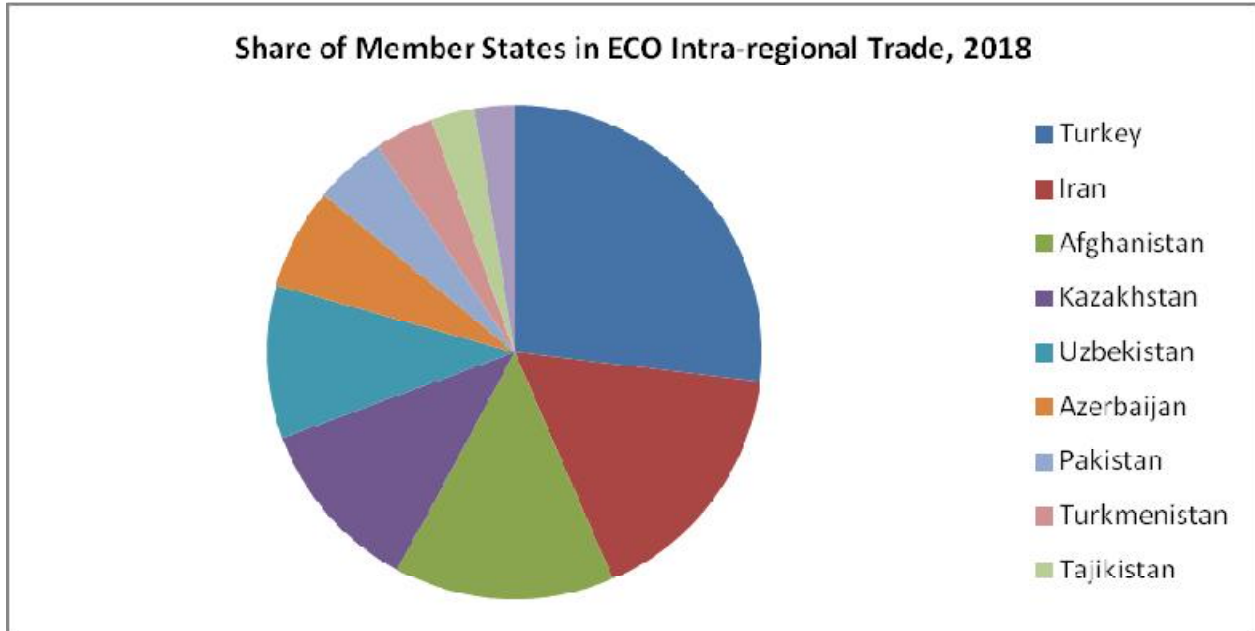

underscore that some economies in the region such as Turkey and Pakistan which are energy importers, gained in external sectors from such change in fossil fuel prices. In short, such change had mixed implications for the ECO member states.

Table-10: Total Intra-Regional Trade (Exports and Imports), 2014-2018

Region /Countries	Years, total trade in thousand USD					Percentage Share in total intra-regional trade, 2018
	2014	2015	2016	2017	2018	
ECO Region	70,858,730	56,590,910	54,198,595	61,527,651	65,378,331	100
Turkey	25,160,364	18,878,403	17,342,210	19,310,995	17,570,971	26.88
Iran	11,983,873	9,458,931	11,496,075	12,759,044	10,858,904	16.61

2.2.2 Disaggregated analysis

2.2.2.1 Intra-regional Exports

Now we turn to intra-regional exports and exports of the member states with other courtiers of the ECO region. It is plain to note that overall, there has not been drastic change in the volume of exports in last five years, though a major dip was recorded in 2015 in the wake of fall in oil prices fall in the global market, with minor fluctuations in the rest of the period. Nonetheless, export component of the external sector of the economies was moving in consonance with the global trends and patterns and as noted above, also in the total volume of intra-regional trade.

Table-11: ECO Region's and Member States Exports to ECO Member States, 2014-2018

Region /Countries	Years, Exports in thousand USD					Percentage Share in 2018
	2014	2015	2016	2017	2018	
ECO Region	34,767,452	28,364,944	28,916,927	30,554,707	30,995,536	100
Iran	7,437,052	6,016,549	7,982,210	8,975,776	7,735,889	24.96
Turkey	11,716,861	9,567,992	9,602,547	8,104,526	7,143,030	23.05
Kazakhstan	6,382,120	4,318,034	3,737,620	4,588,089	5,286,211	17.05
Uzbekistan	2,715,401	1,892,917	1,908,880	2,905,992	3,199,803	10.32

Region /Countries	Years, Exports in thousand USD					Percentage Share in 2018
	2014	2015	2016	2017	2018	
Azerbaijan	952,300	1,794,886	1,442,241	1,559,591	2,019,922	6.52
Pakistan	2,366,987	2,059,969	1,740,941	1,838,035	1,803,404	5.82
Turkmenistan	1,448,860	1,410,672	1,183,976	742,017	1,467,208	4.73
Afghanistan	288,486	290,217	321,336	448,218	873,632	2.82
Tajikistan	584,091	559,983	586,076	772,097	864,907	2.79
Kyrgyzstan	875,294	453,725	411,100	620,366	601,530	1.94

Source: Calculations based on data extracted from UNCTAD/ITC trade map database.

As regards, exports, there has been marginal improvement in 2018 in relation with 2017 from USD 30.55 billion to USD 30.99. As regards individual economies, Turkey saw a major decline during the period 2014-2018 from USD 11.72 billion to USD 7.14 billion. Kazakhstan noted a sharp decline in 2016 but recovered, nonetheless still not reached the level of 2014. Azerbaijan has registered an appreciable increase in intra-regional exports during the period under consideration. Pakistan saw decline in its exports from USD 2.37 billion to USD1.80 billion. Tajikistan has improved in the recent few years whereas Kyrgyz Republic has declined in intra-regional exports. Iran had fewer fluctuations in terms of percentage, more noticeably in 2018, may be as a result of economic sanctions. Apart from other factors, oil prices have been a crucial factor in export as well as imports of the member states. The trends and patterns noted above for each country are individualistic and unique, however largely in congruent with the global and regional trends.

2.2.2.2 Intra-regional Imports

Intra-regional imports more or less followed similar pattern as were noted in case of exports. However, there has been distinctive pattern for all economies. There has modest gain in 2018 compared with 2017 from USD 30.97 billion to USD 34.38 billion. As regards individual economies, Turkey registered considerable decline during the period 2014-2018 from USD 13.44 billion to USD 10.43 billion. Afghanistan intra-regional imports have substantially improved. However, data for 2018 for Afghanistan seems on higher side as noted in the opening as well as closing parts of the document.

Uzbekistan posed visible increase during the period under reference. Iran intra-regional imports, nevertheless, declined in a gradual manner. Similarly, Kazakhstan noted an increase during the period under consideration. Azerbaijan and Pakistan intra-regional imports grew substantially as can be observed from **Table-12**. As regards, Turkmenistan, there has been a noticeable and precipitous decrease. The trends and pattern observed are unique, but overall in line with global and regional patterns and trends.

Table-12: ECO Region's and Member States Imports from the Member States, 2014-2018

Region/Countries	Years, Exports in thousand USD					Percentage Share in 2018
	2014	2015	2016	2017	2018	
ECO	36,091,278	28,225,966	25,281,668	30,972,944	34,382,795	100
Turkey	13,443,503	9,310,411	7,739,663	11,206,469	10,427,941	30.33

Source: Calculations based on data extracted from UNCTAD/ITC trade map database.

2.2.2.3 Intra-Regional Product analysis, 2018

ECO region's intra-regional product analysis has been carried out for exports and imports separately in the following discussion.

2.2.2.3.1 Export Products

Major twenty exports and imports are enumerated in **Table-13** signifying that the region is the biggest exporter of the fossil fuel resources (oil and gas), Petro-chemical products, iron and steel, machinery, agriculture products, minerals, textiles and agricultural products, etc.

Table-13: ECO Intra-Regional Export Products, 2018

HS Code	Products	Exports in 000 USD in 2018	Percentage Share in exports
'TOTAL	All products	30,995,536	100
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	7,196,044	23.22
'39	Plastics and articles thereof	1,783,037	5.75
'72	Iron and steel	1,519,528	4.90
'84	Machinery, mechanical appliances, nuclear reactors, boilers; parts thereof	1,439,918	4.65

HS Code	Products	Exports in 000 USD in 2018	Percentage Share in exports
'08	Edible fruit and nuts; peel of citrus fruit or melons	1,298,576	4.19
'10	Cereals	1,273,015	4.11
'52	Cotton	1,062,501	3.43
'74	Copper and articles thereof	935,131	3.02
'85	Electrical machinery and equipment and parts thereof; sound recorders and reproducers, television ...	820,789	2.65
'07	Edible vegetables and certain roots and tubers	801,917	2.59
'76	Aluminium and articles thereof	789,098	2.55
'11	Products of the milling industry; malt; starches; inulin; wheat gluten	651,097	2.10
'73	Articles of iron or steel	614,594	1.98
'26	Ores, slag and ash	586,867	1.89
'25	Salt; sulphur; earths and stone; plastering materials, lime and cement	518,983	1.67
'17	Sugars and sugar confectionery	464,182	1.50
'87	Vehicles other than railway or tramway rolling stock, and parts and accessories thereof	414,365	1.34
'79	Zinc and articles thereof	385,499	1.24
'57	Carpets and other textile floor coverings	355,562	1.15
'31	Fertilizers	346,384	1.12
Total		23,257,087	75.03

Source: Calculations based on data extracted from UNCTAD/ITC trade map database. Note: The data aggregated are mirror and direct data for 2018.

2.2.2.3.2 Import Products

It is interesting to observe, that, the region' biggest import is also fossil fuel resources, followed by machinery, agriculture products, iron and steel, chemical and pharmaceutical products. Surprisingly, exports and imports of the region have common products implying that there are huge complementarities that exist in the region. Exports and imports seem are less diverse.

Table-14: ECO Intra-Regional Imports, 2018

HS Code	Products	Imports in 000 USD in 2018	Percentage Share in exports
'TOTAL	All products	34,382,795	100
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	9,466,778	27.53
'84	Machinery, mechanical appliances, nuclear reactors, boilers; parts thereof	1,720,254	5.00
'11	Products of the milling industry; malt; starches; inulin; wheat gluten	1,719,826	5.00
'10	Cereals	1,595,299	4.64
'39	Plastics and articles thereof	1,560,452	4.54
'72	Iron and steel	1,468,137	4.27
'74	Copper and articles thereof	1,271,660	3.70
'08	Edible fruit and nuts; peel of citrus fruit or melons	993,424	2.89
'52	Cotton	911,512	2.65
'68	Articles of stone, plaster, cement, asbestos, mica or similar materials	737,719	2.15
'90	Optical, photographic, cinematographic, measuring, checking, precision, medical or surgical ...	726,102	2.11
'07	Edible vegetables and certain roots and tubers	725,415	2.11
'76	Aluminum and articles thereof	644,516	1.87
'85	Electrical machinery and equipment and parts thereof; sound recorders and reproducers, television ...	641,926	1.87
'17	Sugars and sugar confectionery	605,152	1.76
'26	Ores, slag and ash	594,751	1.73
'73	Articles of iron or steel	513,426	1.49
'79	Zinc and articles thereof	445,166	1.29
'25	Salt; Sulphur; earths and stone; plastering materials, lime and cement	412,022	1.20
'31	Fertilizers	393,131	1.14
Total		27,146,668	78.95

Source: Calculations based on data extracted from UNCTAD/ITC trade map database.

2.2.2.3.3 Bilateral⁶Trade among ECO Member States

Countries in the ECO region are engaged in bilateral trade over centuries. Each of the ECO member state is trading with the rest of nine partners of the region at varying levels. Following Tables entail information about a country's trade, export and imports separately, with remaining nine members. Two indicators have been used; namely, Percentage Share (%) in country's total Exports and Country's share in exports to ECO bloc for ascertainment of the magnitude of trade with each other both in Exports and Imports. Information presented in **Tables 15-25** has also been arranged in Matrices, given in **Tables 26-29** after bilateral Tables, in the following discussion.

Table-15: Bilateral Trade of Afghanistan with other ECO Member States, 2016

Major Exports Markets in ECO Region, 2016				Major Imports Markets in ECO Region, 2016			
Importers	Exported value in 2016 (in thousand USD)	Percentage Share (%) in Afghanistan's Exports	Percentage Share (%) in Exports to ECO Countries	Exporters	Imported value in 2016 (in thousand USD)	Percentage Share (%) in Afghanistan's Imports	Percentage Share (%) in Imports to ECO Countries
World	596,455	100	---	World	6,534,140	100	---
ECO	321,336	53.87	100.00	ECO	4,012,840	61.41	100.00
Pakistan	283,317	47.50	88.17	Iran	1,265,139	19.36	31.53
Iran	18,823	3.16	5.86	Pakistan	1,198,759	18.35	29.87
Turkey	12,147	2.04	3.78	Kazakhstan	621,625	9.51	15.49
Kazakhstan	3,988	0.67	1.24	Uzbekistan	399,144	6.11	9.95
Turkmenistan	1,755	0.29	0.55	Turkmenistan	355,401	5.44	8.86
Tajikistan	894	0.15	0.28	Tajikistan	79,681	1.22	1.99
Uzbekistan	412	0.07	0.13	Turkey	78,319	1.20	1.95
				Azerbaijan	14,688	0.22	0.37
				Kyrgyzstan	84	0.00	0.00

Source: Working based on data taken from ITC-UNCTAD's COMTRADE Database. Data used for 2016 which seems more realistic in view of aggregated data available in the World Bank.

⁶In case, any member is not mentioned in the Table, it implies that country is not engaged in exports or imports, as the case may be, or information is currently not available with regard to other partner(s). This happens in very few cases. 2. Figure 0.00 mean that value is too low to reflect in two digits after decimal. 3.----- means not applicable.

4. As aggregated data for 2018 has been used in most of the discussion, intra-regional trade working has also been made for 2018 for Afghanistan only for better understanding. As it appears that in percentage terms, there is not substantial change in the overall results. For further explanation, Note on data may be consulted given at the end of the document containing information for Afghanistan.

Table-16: Bilateral Trade of Afghanistan with other ECO Member States, 2018

Major Exports Markets in ECO Region				Major Imports Markets in ECO Region

2.2.2.3.4 Highlights of the Intra-Regional Trade Matrix⁷

Matrices 1-4 reveal that Intra-regional exports of Tajikistan with the ECO economies are about 81 percent, Afghanistan's 54 percent, Kyrgyz Republic's 33 percent and Uzbekistan's 32 percent. The overall intra-regional trade of the Central Asian Republic (CAR) is 28 percent, well above the region's intra-regional trade figure of 8.10 percent.

It is absorbing to note that in exports, landlocked economies of the Central Asia, namely, Tajikistan (80.54), Uzbekistan (32.44), Kyrgyz Republic (32.62), Azerbaijan (10.38) and Kazakhstan (8.67) are much more integrated than the coastal economies of the region such as Iran, Pakistan and Turkey with the intra-regional percentages of 8 percent, 7.63 percent and 4.25 percent respectively. It appears that geographic nearness/contiguity, linguistic commonalities and influences play a central role in defining trade, more dominantly in landlocked economies exporting mineral and agriculture products which constitute a large share in these economies. Tajikistan is a case in point, where Ore, Slag, Ash (HS-26), Cotton (HS -52) and Aluminum (HS-76), collectively make up 75 % of its exports.

This assertion can be overwhelmingly explained with the intra-regional trade ratios of the Central Asian Republics. For Tajikistan, the percentage of Intra regional trade is 81 percent while for Kazakhstan, despite doubly landlocked, and Turkmenistan it is 8.67 percent and 11.99 percent respectively because of the nature of its exports, which are fossil fuel having international market and can be transported easily through pipelines, within the region and beyond depending upon infrastructure and connectivity. In case of imports, Tajikistan's import requirements are 32.12 percent satiated by the ECO countries while the rest of the imports come from the rest of the world. Azerbaijan too has 10.38 percent intra-regional trade as the exports are primarily based on hydrocarbon resources and are marketable easily within as well as outside region. Its imports are 20.26, almost double of its intra-regional exports.

⁷**Key to Matrix (1-4): Tables may be read from row wise/horizontally.**

1. The percentages given in **Matrix-1** express percentage share in country's total world exports. In Matrix 1, columns give importing countries of the ECO region and the last column provides total of exports of a country made to the importing countries of the ECO region. Similarly, a cell in Matrix-1 explains share of importing country (columns) in exports of a country given in (rows). **Matrix 2** is derived from Matrix-1 signifying that if total trade of exporting country (row) with ECO is considered 100, it shows how much a country is exporting to its importing partners. The percentages given in **Matrix-3** show percentages share in country's total world imports. Likewise, **Matrix-4** is based on Matrix-3 implying that if total imports of the country (rows) from ECO countries are considered 100, what is the percentage of the other exporting partners.

2. Matrices are based on Tables 2.26-2.29 and have been developed to reflect whole information in a cogent way. However, in case of confusion, **Tables 15-25**, given in the preceding discussion which is the basis of the Matrices may be consulted.

A look at the disaggregated data and by collating various sections of the document, it is ascertainable that Afghanistan's intra-regional exports is 53.87 percent, which is also a landlocked country mainly exporting primary commodities, more specifically, top five major export products are 45.23 percent Edible fruits (HS-08), 12.10 percent Vegetables (HS-13), 10.04 percent Edible Vegetables (HS-07) and 4.98 percent Spices (HS-09) and 10.11 percent mineral fuels (HS-27), in aggregate about 71 percent belong to the agriculture category while 10 percent fall in the mineral's category.

As regards imports, Afghanistan imports over 61.41 percent come from ECO neighboring countries, mainly from Iran, Pakistan and Kazakhstan. Thus, in case of exports and imports, Afghanistan's over half of international trade supplies come from immediate ECO neighbors. After Afghanistan, Turkmenistan imports, 35.31 percent from the ECO region followed by Kyrgyz Republic and Azerbaijan, both about 20 percent. For the rest of the countries level of trade can be ascertained from these Matrices and Tables 2.152.25 which form the basis of these matrices.

2.3 Region's Indicative Potential to Export (in major 20 product groups)

2.3.1 Intra-regional Potential (Exports Perspective)

From the data reported in the previous section, it is evident that intra-regional trade is low at 8.1 percent in 2018 but it is high for the Central Asian Republics (CAR) region. Potential of region in exports and imports with its members is a matter of immense interest for the policy makers in the region and beyond. It is instructive to recall that structure of the economies of member states and composition of exports and imports are such that there is vast potential to engage in merchandize trade. Studies as well as data reported in previous Tables provide ample proof to this contention. In the following discussion, a plain analysis is being carried out to ascertain the factual position. For detailed discussion, Section 4 in dedicated.

Table-30: Product-wise ECO Exports to the world and the ECO and Indicative Potential, 2018

Source: Source: Calculations based on data extracted from UNCTAD/ITC trade map database.

Note: (1) Col. 6=Col.5 -Col.3. Note (2) Indicative potential reported in the last column may be capped actual exports to world recoded in column 4. It is more realistic from capacity perspective.

A look at region's export to the world in terms of top 20 products (**Table-30**) reveals that energy remains top product exported to the world by the ECO region as well as to other ECO member states followed by plastics and articles thereof, Iron and steel, machinery, mechanical appliances, cereal, edible fruit and nuts, cotton and copper implying that exports of the region are largely resource-based and agriculture and overwhelming share comes from hydro-carbon and mineral at least for 6 economies of the region. Member states are intensifying diversification process of the economies which is reflected from its exports to the world by the ECO member states.

Indicative potential figures recorded in Table 2.30 show that mineral fuels, mineral oils and products of their distillation are the main products, as anticipated, exported by the region to the world and out of USD 143 billion exports only 6 billion go to ECO region. The region is importing USD 66 billion; so to say the region is supplying merely 10 percent to the region and has potential to export 60 billion. In the same manner, Vehicles and their spare parts, USD 26 billion, Iron and steel by USD 18 billion, Machinery, mechanical appliances USD 16 billion, followed by plastic and articles thereof which have at least USD 10 billion USD potential. All the referred items except mineral fuels have potential to export less than its imports meaning thereby that the region has the capacity to export which currently the member states are importing from the rest of the world, non-ECO member states. Thus, in all save one product groups, indicative potential to export is more than its imports.

From this situation, it can be deduced that indicative potential can be capped up to the imports of a particular products. All these figures reported in the table show that region has vast potential and focusing on only few products which are substitutable such as mineral fuels and oil can improve the intra-regional trade scenario.

2.3.2 Intra-regional Trade Potential (Imports Perspective)

ECO region's potential can also be ascertained from import perspective. ECO region can export to the member states. Second last column paints interesting picture, giving indicative potential of member states to import from the region. Last column provides information on "Currently importing from the region (%)", which is self-explanatory. It shows that except few product groups, most of the items, which have huge share in ECO imports, are less than ten percent. Mineral fuels are a case in point with 6.45 percent, which is a matter of concern.

To have clear picture **Table-31** present values of "*Indicative Potential of the region to import*" (*italicized for reference*) from low to high while Table-32 gives information "*Currently importing from the region*" (*italicized for convenience*) perspective low to high.

Table-31: Product-wise ECO Imports from the World and the ECO and Indicative Potential, 2018

Source: Source: Calculations based on data extracted from UNCTAD/ITC trade map database.

Tables-31 to33 manifestly uphold the findings of previous discussion. The region has the capacity to supply the products and buyers in the region also import from non-ECO importers. Despite complementarities, bilateral trade in the region is low and member states are importing less from the region. Thus, it is abundantly clear that there is huge potential in almost all product groups/items and many times of the existing level of trade in each of the product group. These products can be identified and assigned priority to enhance intra-regional trade. This is plain investigation but for detailed and disaggregated analysis, a section-4 is dedicated which uncovers product-wise potential of trade for each of the member states taking into consideration of their exports and will find out the capacity of the region to export to its member states.

The subsequent section will dilate upon trade with the inter-regional/blocs. Needless to emphasize that ECO needs to enhance intra-regional as well as inter-regional trade for accelerating economic growth in the region.

Section-3

ECO Region's Trade Relations with other Regional Blocs

3. ECO Region's Trade Relations with other Regional Blocs

Regionalism is a great reality of our time. Even when intensive multilateral effort was underway for the creation of WTO, regional blocs around the continents were also in fashion and working in parallel in most parts of the world. Almost all members of WTO are members of regional trade blocs spreading inter-continental, intra-continental, inter-regions and intra-regional. Increase in intra-regional trade is one of the results of these economic blocs, created under the Regional Trade Agreement (RTAs) which are also in accordance with the rules of the WTO and help trade liberalization in the regions, group of countries, not necessarily confined to contiguous states. There are numerous success stories in all continents; EU, NAFTA, ASEAN, MERCOSUR are few often quoted in the discourses on this subject.

Also, there is also another fascinating theme that countries prosper together and the notion that development is contagious has gained wider acceptance and credence around the globe. The policy makers prompt to utilize natural resources for prosperity and that stays one of the basic goals of the organization.

3.1 Highlights of ECO's Trade Relations with other Major Trade Blocs/Regions

Tables 34-47 entail ECO's bilateral ties with other major economic blocs/groupings, inter-governmental organization spanned over continents and within the continents or the regions. Some salient features of the economic relationship, as measured by trade aggregates such as exports, imports and trade gaps (surplus or deficit), emerging from above metrics are presented hereunder:

- a. ECO has trade surplus with high income and advanced economies, inter-governmental organizations, like G-7, OECD and more pronouncedly with EU-28 with over 28 billion USD, falling in the immediate neighborhood on the western side of the ECO region. With G-7, ECO's exports almost match with its imports, nonetheless resulting minor surplus. The huge trade surplus of EU-28 is partially neutralized by two advanced economies of NAFTA, USA and Canada, which are also part of G-7.
- b. OECD, a club of 36 industrialized and emerging economies spanning over North and South America to Europe and Asia-Pacific, too has surplus emanating from the hydrocarbon exports of the region and the value added manufactured and quality products largely from Turkey, Kazakhstan, Azerbaijan, Pakistan and Iran which are the largest suppliers of the exports to the OECD market. It is quite encouraging to note the trade surplus with OECD⁸ that represents about 80 percent of the world trade and investment.

Source: Calculations based on UNCTAD/ITC Trade map data. This much data was available on continents.

- c. The bottom line of ECO surplus with G7, EU, OECD is that fossil fuels, which have relatively inelastic demand and most of the economies falling in the immediacy of the region import oil, gas and minerals from the energy-rich ECO region, more so from the Central Asian region. Also, high value-added products of the region are exported to Europe and other some advanced economies, emerging from their demand for such products.
- d. With APEC bloc, the region is in deficit, mainly because of trade deficit with its major trade partners, namely, Russia, China, US, Canada, Korea and Japan, and some South Eastern nations. Thus, ECO's trade deficit with NAFTA, which has all its members in APEC, to some extent, explains the APEC trade gap.
- e. Emerging markets represented by five major emerging national economies, BRICS (Brazil, Russia, India, China and South Africa), which are the focus of current and future trade, are exporting more to the region than importing from it, hence the deficit to the region. Again, this 76 billion USD deficit is explained by all member states, mainly by Russia, China and India with USD 33 billion, USD 30 billion and USD 7 billion respectively.
- f. For other economic blocs such as ASEAN and SAARC, ECO is in deficit, modestly with ASEAN and marginally with SAARC. Main source of ECO's shortfall with ASEAN economies emanates from Malaysia, Indonesia, Thailand, Singapore and Vietnam as can be ascertained from **Table-35A**s regards, SAARC, exports are nearly the same leading to minor deficit to the region.
- g. ECO with GCC, an alliance of Arab states except Iraq, too have trade deficit with UAS 12 billion principally from UAE, Saudi Arabia and Qatar which are chiefly fossil fuel product suppliers to some ECO countries such as Pakistan and Turkey.
- h. In case of Eurasian Economic Union (EAEU) largely in the north of the ECO region, the gap is massive with 36 billion USD, resulting from heavy exports from Russia to the ECO member states.
- i. ECO region's imports from D-8, representing developing countries of North Africa, Europe, South Asia, are greater than its exports, chiefly coming from Malaysia and Indonesia and resulted trade deficit of the ECO region.
- j. OIC's representing 57 member states, largely Muslim population, collective imports from the ECO region are more than its combined exports making the ECO region as net exporter to the OIC countries which is a gratifying matter.

- k. Central Asian Republics (CAR) and the Turkic Council (TC) have 5 members each which all are the members of the ECO, both having trade deficit, high deficit with CAR while minor deficit with Turkic Council. Nevertheless, it is comforting to note that the deficit in both cases emerges from the excess exports of the ECO's other member states and the resources remain within the region.
- l. ECO region's trade with East and South African countries reflected by COMESA and Caribbean nations measured by economic grouping, CARICOM, yields surplus of 2.6 billion USD with the former and minor 300 million USD with the latter. Nevertheless, volume of trade with African and Caribbean nations is quite low. However, with South American nations, trade is relatively high as is clear from the figures of MERCOSUR trade bloc. ECO trade with South African Custom Union (SACU) is low and in deficit.
- m. Economic presence of the ECO region's products (exports) is largely in Europe, about 50 percent followed by Asia over 45 percent; while North America, Africa, South America and Caribbean and Oceania come after it. In case of ECO region's imports, the biggest supplying market is Asia followed by Europe. The other continents are in the same order i.e. North America, Africa, Latin and Caribbean and Oceania with respect to supplying markets of our imports. It is pertinent to highlight that Asia appears distinct in imports mainly because of substantial exports from Russia and China to the ECO region. Results with regard to continents may be slightly affected with completion of data.
- n. ECO's exports to the Middle East are also in surplus by about 4 billion USD, the region in the immediate neighborhood and most the countries in the Middle East are energy producers cum exporters, thus competing in the fossil fuel market.
- o. Thus, ECO in the East (SAARC and ASEAN) has trade deficit while in the west (Europe-28) the region has marked surplus of over 28 billion USD. Likewise, with the North side massive deficit (Russia and China) and with the South (Middle East) has trade surplus.
- p. In view of the geographic location, nature of exporting products and their demand in the advanced economies, ECO trade is mainly with the developed economies of the North i.e. Europe, G-7, OECD which is evident from the trade surplus figures reported in Table 3.8. Conversely, there is lesser trade with the South America, Africa as well as Oceania compared with their potential.
- q. It is interesting to note from the facts discussed in the foregoing discussion that geographic proximity, historical linkages are also a reality along with market forces and complementarities of trade which define economic relationships/engagement of the national economies and determine the patterns of trade. A further analysis of the composition and structure of region's exports and imports will bring out more revealing and fascinating facts.

3.2 Inter-Continental, Inter-regional major blocs

Comparison of selected major economic trade blocs of all regions is summarized as under first in alphabetical order followed by two criteria/yardsticks.

3.2.1 Comparison of Major Economic Trade Blocs

(By order of bloc's percentage in global GDP)

For convenience, bloc/region's total trade as percentage of GDP can be categorized into three main groups. This categorization, however, is merely for grasping better understanding of this metrics and not an international standard. Group 1: over 10 percent, Group-2: between 2 and 10 percent and Group-3 less than 2 percent.

Table-51: Summary of Comparison of Major Economic Trade Blocs (in groups)
(By order of bloc's percentage in global GDP,)

Group	Range	Blocs/Region Name (by order of percentage, max to min)	Group mostly covers
1	Over 10 percent	<ul style="list-style-type: none"> • APEC (21 member states): 50.50 • EU (28 member states):32.48 • BRICS (5 major emerging economies): 17.52 • APTA (7 member states): 17.50 • Greater China (.... countries): 16.75 • NAFTA (4 member states): 15.83 	Mix of high income, middle income countries, developed, major emerging, transition economies
2	2-10 percent	<ul style="list-style-type: none"> • ASEAN (10 member states): 7.49 • BSEC (12 member states): 4.28 • GCC (6 member states): 3.49 • SAARC (8 member states): 2.80 • ECO (10 member states): 2.09 	Mix of middle income and developing economies
3	Less than 2 percent	<ul style="list-style-type: none"> • MERCOSUR (4 member states): 1.64 • COMESA (19 member states): 0.73 • CAR (5 countries in Central Asia): 0.10 	Mix of emerging economies and developing and less developed countries, also landlocked and contiguous countries of Central Asia

Source: Calculations based on UNCTAD/ITC Trade map data.

Data shows in the **Group-1**, there are five blocs/regions. APEC and EU and BRICS are first three biggest economic/trade blocs where combined trade of the bloc/groups as percentage of global trade is 50.50, 32.48 and 17.52 percentage respectively. Surprisingly, the said figure for APTA,

Greater China and NAFTA are in the same vicinity from 15-17 percent, more precisely with 17.50, 16.75 and 15.83 respectively. Thus, with the exception of first and second, APEC and EU, there is little variation in the metric.

Group-2 is led by ASEAN followed by BSEC and GCC with 7.49, 4.28 and 3.49 percent respectively. The share of trade as percentage of global trade in case of SAARC and ECO are closer, 2.80 and 2.09 per cent respectively.

**Table-52: Summary of Comparison of Major Economic Trade Blocs
(By order of bloc's Intra-regional trade)**

Group	Range	Blocs/Region Name (by order of Intra-regional trade, max to min)	Group mostly covers
1	Over 20 percent	<ul style="list-style-type: none"> • APEC (21 member states):69.79 • EU (28 member states): 61.40 • NAFTA (4 member states): 39.94 • CAR (5 countries in Central Asia):28.04 Greater China : 23.97 • ASEAN (10 member states): 23.21 	Mix of high income, middle income countries, developed, major emerging, transition economies, some small economies of Central Asia
2	10-20 percent	<ul style="list-style-type: none"> • APTA (7 member states): 15.51 • MERCOSUR (4 member states): 14.28 • BSEC (12 member states): 14.11 • BRICS (5 major emerging economies): 13.40 	Mix of middle income and developing economies
3	Less than 10 percent	<ul style="list-style-type: none"> • GCC (6 member states):9.83 • ECO (10 member states): 8.11 • COMESA (19 member states): 6.04 • SAARC (8 member states): 5.97 	Mix of middle income, emerging economies and developing and less developed countries

Source: Calculations based on UNCTAD/ITC Trade map data.

In case of **Group-3**, there are three economies, MERCOSUR, COMESA and CAR all belong to three different continents. MERCOSUR (South America) stand with 1.64 percent, COMESA (East and South Africa) with 0.73 percent while CAR (Central Asia) with 0.10. In case of MERCOSUR, four participating economies i.e. Argentina, Brazil, Paraguay and Uruguay have coastal economies, COMESA has mix of coastal and landlocked economies while in the CAR, all countries, namely, Kazakhstan, Kyrgyz Republic, Tajikistan, Turkmenistan, Uzbekistan are landlocked states with

combination of traditional to modern economies. Nevertheless, the share is the least among the trade blocs reported in the Table. CAR has been reported as all economies are part of ECO. All these groups are succinctly summarized in **Table-52**.

From the yardstick of intra-regional trade, Group-1, all above 20 percent of their trade as intra-regional trade, contains five blocs/region namely, APEC, EU, NAFTA, CAR, Greater China and ASEAN. The most distinguishing feature of this group is that most of the economies are developed such as in APEC, EU and NAFTA. The other noticeable feature is that 4 out of 5 blocs/ region in this group, namely, EU, NAFTA, CAR, Greater China and ASEAN have geographical contiguity. This result is in congruent with the trade theories/models and economic rationale. The only exception to this group is APEC.

Similarly, Group-2 is made up of trade blocs with intra-regional trade between 10-20 percent, with 5 trade blocs i.e. APTA, MERCOSUR, BSEC, and BRICS. Analogously, **Group-3** reflects blocs with less regional integration, containing four regional groupings such as GCC, ECO, COMESA and SAARC.

3.2.2 Comparison of peer economic/trade blocs by two yardsticks (Yardstick-1: Bloc's trade as percentage of total global GDP and Yardstick-2: and Intra-regional trade in percentage)

- i. APEC and EU both stand at the top in both yardsticks.
- ii. BRICS occupying prominent place in Group-1 in first yardstick but went down in the group-2 of medium level in 2nd yardstick of intra-regional trade.
- iii. CAR graduated the most, by securing position in the top notch/ category of regional integration, mostly developed and middle-income countries, after APEC, EU and NAFTA
- iv. MERCOSUR moved up from low as per yardstick-1 to medium category in yardstick-2
- v. ASEAN in the medium group of yardstick-1but moved up in the intra-regional trade yardstick, meaning thereby the most integrated regions in the world.
- vi. SAARC moved downward in respect of regional integration yardstick.
- vii. ECO moved from Group-2 of yardstick-1 to Group-3 in yardstick-2, implying that it has over 2 percent percentage but is less integrated.

3.2.3 ECO's Comparison with ASEAN, SAARC and CAR

Straight comparison of trade or economic blocs with intra-regional trade is hard, however, for the sake of simplicity, by the yard stick of intra-regional trade, ECO can be compared with ASEAN, SAARC, MERCOSUR and possibly with GCC based on joint criteria of bloc's trade as percentage of total trade and intra-regional trade percentage as exhibited in Table 3.19 and 3.20. When ECO is compared on this yard stick, ECO (8.11 percent) is markedly below ASEAN (23.21 percent) and marginally below than GCC (9.83) while is faring better than COMESA (6.04 percent) and SAARC (5.97 percent); thus, ECO stands in the middle with opportunities to graduate in the upper echelon.

It is a matter of great solace that Central Asian Republics (CAR), which involves all its five member states in ECO, is one of the most integrated regions as reported in Group-1 of Table 3.19 though with its low share in global trade (0.10 percent). It may further be recollected that within CAR, there is ample variability from 80 percent for Tajikistan to 8.67 percent for Kazakhstan. Thus, some courtiers in the Central Asia are integrated as high as 80 percent in exports such as Tajikistan 32 percent in imports from the regional partners. Further to recall that three coastal economies, bigger as well, of the region, namely, Turkey, Iran and Pakistan, are more integrated in volume of trade terms, but are less integrated in terms of trade percentage, may be because of non-implementation of ECO Trade Agreement and weak transport and communication linkages among the member states.

Section-4

ECO Regions Potential to Export to its Members States/
Member States Potential to Import from the ECO Region

4. ECO Region's Potential to Export to its Member States

ECO region is one of the most blessed regions; it is geo-strategically located, has geo-economic endowments and blessed with abundant natural resources. Estimates show that it has one third of the known hydrocarbon global resources. Undeniably, inter alia, some member states have made remarkable growth in the past, especially in last two decades or so. As a result of this high performance, five member states are in the upper middle-income group whereas four countries are in the lower middle-income group and most of the countries have significantly graduated on many counts, however, followed unique growth trajectories. Few figures and visualizations reported in the precious sections are ample testimony to this contention.

Nonetheless, it is a matter of great concern that intra-regional figures reported and discussed in the foregoing sections show that intra-regional trade is low compared to its potential and also in comparison with other economic blocs such as ASEAN, EU, MERCOSUR, etc. It needs to be highlighted that volume of inter-regional trade with other regions, economic blocs can also be enhanced; however, this segment will not touch this area. There is general consensus among policy makers that intra-regional trade has the potential to be enhanced multiple times by utilizing natural, physical, economic and social capital of the region. This segment will explore this fundamental question.

First part of the section works out the Region's potential to export to its member states in major twenty products group, which constitute major part of their imports. Last column indicates the capacity/potential to export to ECO bloc or the member countries can import from the region in accordance with their needs and preferences.

Part two provides summary of data on twenty major products imported products in 2018 for each of the member countries along with aggregates and useful indicators/ metrics such as Percentage of imports from ECO and Region's capacity to export in number of times.

Part three abstracts most useful macro points from the detailed analysis given in the precious part and finally finds the capacity of the region to export and member countries to substitute their non-ECO imports with imports from the region. Thus, final estimates are based on this three-tiers method for trade potential.

4.1 Part-1/Step-1: Country-wise and Product-wise Potential to import from the Region

Table-53: Afghanistan's Potential to Import from the ECO Region /ECO Region's Potential to Export to Afghanistan, 2018

'17	Sugars and sugar confectionery	423,281	385,515	91.08	1,481,539	4
'84	Machinery, mechanical appliances, nuclear reactors, boilers; parts thereof	361,246	157,063	43.48	17,006,902	47

⁹Two indicators have been employed, namely, percentage of country's imports from the ECO region (column 4 /column 3 * 100) and Region's export capacity to a particular country given in the last column, worked out by region's exports (excluding concerned country) divided by country's imports for a particular year). For convenience, the former indicator has been expressed in percentage term while the later is in no of times for more meaningful comparison.

HS Code	Product Group	Afghanistan's Imports (000 USD)	Imports from ECO (000 USD)	Percentage of imports from ECO	Region's Capacity (000 USD)	Region's capacity (times)
'40	Rubber and articles thereof	322,924	13,836	4.28	2,975,776	9

Source: Calculations based on data extracted from UNCTAD/ITC trade map database and previous Tables in Section 2.

¹⁰Current work focused on top 20 twenty products. Result can be generalized on the rest of the product groups.

¹¹ Discussed in Intra-Regional Section of the document and potential of trade was worked out for major twenty import products of the region.

The aggregation of data given in **Table-73(a)** manifests that the percentage of import from ECO can be categorized into three distinct groups. Group-1 include countries having value of the metric over 30 percent, which include three countries i.e. Afghanistan, Tajikistan and Kyrgyz Republic. By this criterion, Afghanistan's share of imports from the region is the highest with 57.84 percent while Tajikistan follows it with 32.60 percent. It is instructive to recall that in exports, mentioned in Intra-Regional Trade section, Tajikistan was found highest exports to the region with 80.54 percent followed by Afghanistan with 53.87 percent. Thus, in percentage terms, Afghanistan is one of the most integrated countries with the region along with Tajikistan; both are landlocked and heavily trade with ECO members especially with immediate neighboring countries. Nature of its trade structure, exports and imports, largely explain this interesting phenomenon. Turkmenistan's import percentage from the ECO region is almost the same with Tajikistan with 31.89 percent.¹²

Likewise, **Group-2** includes other three countries, namely, Azerbaijan, Uzbekistan and Kyrgyz Republic which have intra-regional imports of 18.19, 17.92 and 17.82, all almost the same level. It is gratifying to note, Central Asian Republics have 28 percent intra-regional trade (exports and imports) which is at least 3.5 times of the region's average and comparable with most integrated regions.

Group-3 includes the 4 biggest economies of the region which cumulatively account for 91.52 percent of the region's GDP and similar with total trade; Kazakhstan, Iran, Turkey and Pakistan with 6.48, 5.57, 5.10 and 1.63 percent respectively. In this group, there are three coastal economies i.e. Iran, Pakistan and Turkey while 4th economy is Kazakhstan. Pakistan share is the lowest at 1.63 percent while its share exceeds 2 percent in combined trade, exports and imports.

Data on indicator "**Region's Capacity to Export to member states**" shows that for four economies namely, Turkey, Iran, and Pakistan and Kazakhstan, region's capacity to these economies are have less than ten times, with 1, 3, 5, and 9 times respectively, in line with anticipation. Indeed, it is closely allied with the size of the economy and the import structures/composition. This is the same order of the economies of the region from highest to the lowest with respective shares of 50.8, 21.91, 10.43 and 8.38 in real GDP in 2018.

¹²These results worked out by alternative method are same and are reported in Intra-regional Trade Section of the document.

Group-2, countries having the value of the indicator in the range of 10-50, includes Afghanistan, Azerbaijan and Uzbekistan with 20, 30 and 18 times respectively. Analogously, Group-3 (capacity over 50 times) includes Kyrgyz Republic, Tajikistan and Turkmenistan with 71 times, 100 times and 121 times values respectively. Finally, potential of the ECO Region has been estimated 10 times through 3-steps method.¹³

Conclusions

The upshot of analysis is that indicative potential of the region in major 20 products, which constitute 83 percent of its total imports, is 10 times implying that the member states can on average increase trade with the fellow member countries at least by 10 times. As per another estimate through alternate method, the region has the capacity to increase intra-regional trade by 11 times¹⁴. Nevertheless, utilization of trade potential is an intricate process depending on host of factors such as country preferences, income levels, demand structures, availability of type of natural resources, developmental needs, government policies, trading arrangement, etc. which define the level of trade among countries.

It is imperative to highlight that PIDE study conducted in 2011 had inferred that intra-regional trade among member states can be enhanced eight (8) times. Thus, the results are in consonance with the earlier work on the subject.

¹³ Three Steps (tiers) method is as follows: Step-1 identifies major 20 sectors of imports of a country for one particular year, in this case 2018, finds product-wise capacity for each major product of a country along with its sources/ countries which can satiate or supplying markets in the region for each product imported by a country. Step-II aggregates 20 products and finds country-wise capacity to import from the region with useful indicators/metrics/ratios such as ratio of imported products of a country from the region and capacity of a country. Step-III aggregates member states capacities and works out regional capacity in relation with current intra-regional imports. Thus, the method brings out micro as well as macro results with useful metrics/ratios for products, countries and the region.

¹⁴ There are some minor caveats/limitations¹⁴ of the estimates which are not likely to affect the quality of overall results. Data has been cross-checked/matched with World Bank source and there is not any major variation therein except for Afghanistan. Bilateral results of Afghanistan may partially be affected. Note at the end of the document may be consulted for more detail. Further to highlight that all countries export and import data from both sources, which are also based on the local sources/ economies, are similar, reported at the end of the document.

Section-5

Potential to export amongst Member States

5. Potential to export amongst Member States

Previous Section estimated the region's capacity to export to its member states or conversely member states' capacity to import from the region. In furtherance of estimation of trade potential in the region, this Section will examine each member state's current export to other member states in major twenty products and will work out the potential to export to them. This potential has been worked out bilaterally. Working has been done for each of the countries of the ECO Region in alphabetical order and bifurcated countries which are currently parties to ECOTA and then rest of the member states.

5.1 The Islamic Republic of Afghanistan

Before analyzing Afghanistan's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under. It is important to mention that reported exports and imports for 2018 appear high, for this reason, disaggregated analysis was done for 2016. Data for 2017 was not reported in UNCTAD/ITC trade map.

'41	Raw hides and skins (other than furskins) and leather	26	1,003	16,049	977

¹⁷ **Indicative potential** for Afghanistan's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Afghanistan (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Afghanistan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Afghanistan will engage in trade with ECOTA existing Member States and these countries will wholly import from Afghanistan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Afghanistan's exports to the world (column 5), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

Source: Source: Calculations based on UNCTAD/ITC trade map data.; NR; Not required. **Note:** Sign "----" in the last column indicates that Afghanistan's imports of particular product from the world are short of Iran's exports to Afghanistan, implying that there is as such no additional demand for that particular product group; this has probably emerged because of the fact that data feeding is still under updation process and more entries will be made as and when it is received. Such entries are very few and for Afghanistan dataset only. NR: Not required.

3. Tajikistan

The details, based on trade statistics for 2016, are presented as under:

Total Imports of Tajikistan	USD 3,031 Million
Exports of Afghanistan to World	USD 596 Million
Exports of Afghanistan to Tajikistan	USD 1 Million

The product-wise details of top twenty items are as follows:

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Afghanistan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to other four existing parties (Iran, Pakistan Tajikistan and Turkey) will increase manifold from USD 315 million and US\$ 322 million (to all member states) in 2016 out of its total exports of US\$ 596 million. It merits mentioning that the indicative potential of exports of Afghanistan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Afghanistan like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.2 The Republic of Azerbaijan

Before analyzing Azerbaijan's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-88: Azerbaijan Composition¹⁸ of Exports in 2018: Top Twenty Product Groups

The Republic of Azerbaijan's Composition of Exports in 2018 : Top Twenty Product Groups

²⁰**Indicative potential** for Azerbaijan's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Azerbaijan (2018) from other country's imports of particular product (Column 4-Column 3= Column 6) implying that Azerbaijan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Azerbaijan will engage in trade with ECOTA existing Member States and these countries will wholly import from Azerbaijan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Azerbaijan's exports to the world (column 6), with each of the five Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Azerbaijan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to five existing parties (Afghanistan, Iran, Pakistan, Tajikistan and Turkey) will increase manifold from US\$ 1,037 million and USD2,019 million (to all member states) in 2018 out of its total exports of US\$ 19,459 million. It merits mentioning that the indicative potential of exports of Azerbaijan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Azerbaijan like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.3 The Islamic Republic of Iran

Before analyzing Iran's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-102: Iran Composition²¹ of Exports in 2018: Top Twenty Product Groups

The Islamic Republic of Iran's Composition of Exports in 2018 : Top Twenty Product Groups			
HS Code	Product Groups	Value in thousand USD	Percentage Share (%)

Analysis of Iran's Trade with the ECOTA Contracting Parties

2. Afghanistan

The details, based on trade statistics for 2018, are as follows:

Total Imports of Afghanistan	USD 14,813 Million
Exports of Iran to World	USD 96,618 Million
Exports of Iran to Afghanistan	USD 2,926 Million

The product-wise detail of top twenty items is given as follows:

Table-107: Iran's Trade with Afghanistan

All values USD 000					
HS code	Products which Iran can export to Afghanistan	Iran 's exports to Afghanistan	Afghanistan's imports from world	Iran 's exports to world	Indicative ²² Potential for Iran 's exports to Afghanistan
'TOTAL	All products	2,926,662	14,813,181	96,617,521	NR
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	605,627	1,939,351	66,366,802	1,333,724
'72	Iron and steel	278,854	677,393	3,905,528	398,539
'39	Plastics and articles thereof	257,231	231,938	5,551,469	-

'04	Dairy produce; birds' eggs; natural honey; edible products of animal origin, not elsewhere	103,358	223,920	615,660	120,562

²²**Indicative potential** for Iran's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Iran (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Iran can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Iran will engage in trade with ECOTA existing Member States and these countries will wholly import from Iran which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Iran's exports to the world (column 5), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA)**. The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

All values USD 000					
HS code	Products which Iran can export to Afghanistan	Iran 's exports to Afghanistan	Afghanistan's imports from world	Iran 's exports to world	Indicative ²² Potential for Iran 's exports to Afghanistan

Source: ITC-UNCTAD's COMTRADE Database; **Note:** Sign " -" in the last column indicates that Iran's imports of particular product from the world are short of Iran's exports to Afghanistan, meaning by there is as such no additional demand for that particular product group; this has probably emerged because of the fact that few data is still under updation process and more entries will be made at the later stage. Such entries are very few and for Afghanistan dataset only. NR: Not required.

2. Pakistan

The details, based on trade statistics for 2018, are given as under:

Total Imports of Pakistan	USD 60,163 Million
Exports of Iran to World	USD 96,618 Million
Exports of Iran to Pakistan	USD 1,247 Million

The product-wise details of top twenty items are as follows:

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Iran to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to other four existing parties (Afghanistan, Pakistan, Tajikistan and Turkey) will increase manifold from US\$ 6,619 million and USD 7,736 million (to all member states) in 2018 out of its total exports of US\$ 96,617 million. It merits mentioning that the indicative potential of exports of Iran with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Iran like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.4 The Republic of Kazakhstan

Before analyzing Kazakhstan's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table 116: Kazakhstan's Composition²³ of Exports in 2018: Top Twenty Product Groups

The Republic of Kazakhstan's Composition of Exports in 2018 : Top Twenty Product Groups			
HS Code	Product Groups	Value in thousand USD	Percentage Share (%)
'TOTAL	All products	60,956,233	100
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	42,737,941	70.11
'72	Iron and steel	4,160,440	6.83
'74	Copper and articles thereof	2,548,987	4.18
'28	Inorganic chemicals; organic or inorganic compounds of precious metals, of rare-earth metals, ...	2,135,200	3.50
'26	Ores, slag and ash	2,087,239	3.42

ANALYSIS OF KAZAKHSTAN TRADE WITH THE ECOTA CONTRACTING PARTIES

3. Afghanistan

The details, based on trade statistics for 2018, are as follows:

Total Imports of Afghanistan	USD 14,813 Million
Exports of Kazakhstan to World	USD 60,956 Million
Exports of Kazakhstan to Afghanistan	USD 516 Million

The product-wise details of top twenty items are as follows:

Table-121: Kazakhstan's Trade with Afghanistan

All values USD 000					
HS Code	Products which Kazakhstan can export to Afghanistan	Kazakhstan's exports to Afghanistan	Afghanistan's imports from world	Kazakhstan's exports to world	Indicative ²⁵ Potential for Kazakhstan's exports to Afghanistan
'TOTAL	All products	516,386	14,813,181	60,956,233	NR
'11	Products of the milling industry; malt; starches; inulin; wheat gluten	285,883	1,553,230	466,236	1,267,347
'10	Cereals	68,667	589,913	1,296,184	521,246
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	67,246	1,939,351	42,737,941	1,872,105
'72	Iron and steel	36,248	677,393	4,160,440	641,145
'12	Oil seeds and oleaginous fruits; miscellaneous grains, seeds and fruit; industrial or medicinal ...	19,498	236,630	335,407	217,132
'04	Dairy produce; birds' eggs; natural honey; edible products of animal origin, not elsewhere ...	12,905	223,920	65,569	211,015

²⁵**Indicative potential** for Kazakhstan's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Kazakhstan (2018) from other country's imports of particular product (Column 4-Column 3= Column 6) implying that Kazakhstan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Kazakhstan will engage in trade with ECOTA existing Member States and these countries will wholly import from Kazakhstan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Kazakhstan's exports to the world (column 4), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Kazakhstan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalized, its exports to five existing parties (Afghanistan, Iran, Pakistan, Tajikistan and Turkey) will increase manifold from US\$ 5,286 million in 2018 out of its total exports of US\$ 60,956 million. It merits mentioning that the indicative potential of exports of Kazakhstan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Kazakhstan like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.5 The Kyrgyz Republic

Before analyzing Kyrgyz Republic's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-130: Kyrgyz Republic's Composition²⁶ of Exports in 2018: Top Twenty Product Groups

The Kyrgyz Republic's Composition of Exports in 2018 : Top Twenty Product Groups			
HS Code	Product Groups	Value in thousand USD	Percentage Share (%)

ANALYSIS OF KYRGYZ REPUBLIC TRADE WITH THE ECOTA COTACTING PARTIES

4. Afghanistan

The details, based on trade statistics for 2018, are as follows:

Total Imports of Afghanistan	USD 14,813 Million
Exports of Kyrgyz Republic to World	USD 1,690 Million
Exports of Kyrgyz Republic to Afghanistan	USD 2 Million

The product-wise detail of top twenty items is given as follows:

Table-135: Kyrgyz Republic's Trade with Afghanistan

All values USD 000					
HS Code	Products which Kyrgyz Republic can export to Afghanistan	Kyrgyz Republic's exports to Afghanistan	Afghanistan's imports from world	Kyrgyz Republic's exports to world	Indicative ²⁸ Potential for Kyrgyz Republic's exports to Afghanistan
'TOTAL	All products	1,925	14,813,181	1,690,340	NR
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	815	1,939,351	139,264	1,938,536
'07	Edible vegetables and certain roots and tubers	499	291,119	61,929	290,620
'88	Aircraft, spacecraft, and parts thereof	181	7,608	31,000	7,427

'73	Articles of iron or steel	25	39,816	5,409	39,791

²⁸**Indicative potential** for Kyrgyz Republic's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Kyrgyz Republic (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Kyrgyz Republic can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Kyrgyz Republic will engage in trade with ECOTA existing Member States and these countries will wholly import from Kyrgyz Republic which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Kyrgyz Republic exports to the world (column 6), with each of the five Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

Conclusion

The upshot of the data reported in the foregoing sections and brief analysis is that there is a projected potential for exports of Kyrgyz Republic to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to five existing parties (Afghanistan, Iran, Pakistan, Tajikistan and Turkey) will increase manifold from US\$168 million and 551 million (to all ECO member states) in 2018 out of its total exports of US\$ 1,690 million. It merits mentioning that the indicative potential of exports of the Kyrgyz Republic with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Kyrgyz Republic like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.6 The Islamic Republic of Pakistan

Before analyzing Pakistan's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-144: Pakistan's Composition²⁹ of Exports in 2018: Top Twenty Product Groups

The Islamic Republic of Pakistan: Composition of Exports in 2018 : Top Twenty Product Groups

³¹**Indicative potential** for Pakistan's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Pakistan (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Pakistan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Pakistan will engage in trade with ECOTA existing Member States and these countries will wholly import from Pakistan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Pakistan's exports to the world (column 4), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

(All values USD 000)

Source: Source: Calculations based on UNCTAD/ITC trade map data.; **Note:** Sign "----" in the last column indicates that Afghanistan's imports of particular product from the world are short of Pakistan's exports to Afghanistan, implying that there is as such no additional demand for that particular product group; this has probably emerged because of the fact that data feeding is still under updation process and more entries will be made as and when it is received. Such entries are very few and for Afghanistan dataset only. NR: Not required

2. Iran

The details, based on trade statistics for 2018, are presented as under:

Total Imports of Iran	USD 41,236 Million
Exports of Pakistan to World	USD 23,631 Million
Exports of Pakistan to Iran	USD 23 Million

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Pakistan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to other four existing parties (Afghanistan, Iran, Tajikistan and Turkey) will increase manifold from US\$ 1.8 billion in 2018 out of its total exports of US\$ 24 billion. It merits mentioning that the indicative potential of exports of Pakistan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Pakistan like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.7 The Republic of Tajikistan

Before analyzing Tajikistan potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-158: Tajikistan's Composition³² of Exports in 2018: Top Twenty Product Groups

The Republic of Tajikistan's Composition of Exports in 2018 : Top Twenty Product Groups			
HS Code	Product Groups	Value in thousand USD	Percentage Share (%)

Analysis of Tajikistan's Trade with the ECOTA Countries

6. Afghanistan

The details, based on trade statistics for 2018, are reported as under:

Total Imports of Afghanistan	USD 14,813 Million
Exports of Tajikistan to World	USD 1,074 Million
Exports of Tajikistan to Afghanistan	USD 72 Million

The product-wise detail of top twenty items is given as follows:

Table-163: Tajikistan's Trade with Afghanistan

All values USD 000					
HD Code	Products which Tajikistan can export to Afghanistan	Tajikistan's exports to Afghanistan	Afghanistan's imports from world	Tajikistan's exports to world	Indicative ³⁴ Potential for Tajikistan's exports to Afghanistan
'TOTAL	All products	72,344	14,813,181	1,073,858	NR
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	38,197	1,939,351	79,107	1,901,154
'25	Salt; sulphur; earths and stone; plastering materials, lime and cement	24,485	12,177	65,679	----
'72	Iron and steel	3,084	677,393	5,600	674,309
'13	Lac; gums, resins and other vegetable saps and extracts	2,002	1,017	3,227	----
'36	Explosives; pyrotechnic products; matches; pyrophoric alloys; certain combustible preparations	823	15,314	823	14,491
'07	Edible vegetables and certain roots and tubers	473	291,119	4,302	290,646

³⁴ **Indicative potential** for Tajikistan's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Tajikistan (2018) from other country's imports of particular product (Column 4- Column 3= Column 5) implying that Tajikistan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Tajikistan will engage in trade with ECOTA existing Member States and these countries will wholly import from Tajikistan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Tajikistan's exports to the world (column 4), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

All values USD 000					
HD Code	Products which Tajikistan can export to Afghanistan	Tajikistan's exports to Afghanistan	Afghanistan's imports from world	Tajikistan's exports to world	Indicative Potential ³⁴ for Tajikistan's exports to Afghanistan

Source: Calculations based on UNCTAD/ITC trade map data.; **Note:** Sign "----" in the last column indicates that Afghanistan's imports of particular product from the world are short of Tajikistan's exports to Afghanistan, implying that there is as such no additional demand for that particular product group; this has probably emerged because of the fact that data feeding is still under updation process and more entries reported as and when received. Such entries are very few and for Afghanistan dataset only. NR means not required.

2. Iran

The details, based on trade statistics for 2018, are presented as under:

Total Imports of Iran	USD 41,236 Million
Exports of Tajikistan to World	USD 1,074 Million
Exports of Tajikistan to Iran	USD 35 Million

The product-wise details of top twenty items are as follows:

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Tajikistan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to other four existing parties (Afghanistan, Iran, Pakistan and Turkey) will increase manifold from US\$ 865 million in 2018 out of its total exports of US\$ 1,074 million. It merits mentioning that the indicative potential of exports of Tajikistan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Tajikistan like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.8 The Republic of Turkey

Before analyzing Turkey's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-172: Turkey's Composition³⁵ of Exports in 2018: Top Twenty Product Groups

Analysis of Turkey's Trade with the ECOTA Contracting Parties

7. Afghanistan

The details, based on trade statistics for 2018, are as follows:

Total Imports of Afghanistan	USD 14,813 Million
Exports of Turkey to World	USD 167,924 Million
Exports of Turkey to Afghanistan	USD 145 Million

The product-wise detail of top twenty items is given as follows:

Table-177: Turkey's Trade with Afghanistan

All values USD 000					
HS Code	Products which Turkey can export to Afghanistan	Turkey's exports to Afghanistan	Afghanistan's imports from world	Turkey's exports to world	Indicative ³⁷ Potential for Turkey's exports to Afghanistan
'TOTAL	All products	145,410	14,813,181	167,923,862	NR
'85	Electrical machinery and equipment and parts thereof; sound recorders and reproducers, television ...	18,949	538,139	8,722,854	519,190
'30	Pharmaceutical products	15,272	179,250	1,172,518	163,978
'84	Machinery, mechanical appliances, nuclear reactors, boilers; parts thereof	13,973	361,246	15,827,680	347,273
'73	Articles of iron or steel	10,304	39,816	6,533,980	29,512
'57	Carpets and other textile floor coverings	8,009	14,982	2,264,274	6,973
'39	Plastics and articles thereof	6,806	231,938	6,042,982	225,132
'71	Natural or cultured pearls, precious or semi-precious stones, precious metals, metals clad ...	5,461	4,802	7,172,319	-659
'15	Animal or vegetable fats and oils and their cleavage products; prepared edible fats; animal ...	4,854	829,831	993,404	824,977
'62	Articles of apparel and clothing accessories, not knitted or crocheted	4,487	24,913	6,262,454	20,426
'21	Miscellaneous edible preparations	4,367		743,228	-----
'19	Preparations of cereals, flour, starch or milk; pastrycooks' products	4,361	19,319	1,740,265	14,958

³⁷ **Indicative potential** for Turkey's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Turkey (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Turkey can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Turkey will engage in trade with ECOTA existing Member States and these countries will wholly import from Turkey which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Turkey's exports to the world (column 4), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

All values USD 000					
HS Code	Products which Turkey can export to Afghanistan	Turkey's exports to Afghanistan	Afghanistan's imports from world	Turkey's exports to world	Indicative ³⁷ Potential for Turkey's exports to Afghanistan
'96	Miscellaneous manufactured articles	3,678	47,041	902,366	43,363
'93	Arms and ammunition; parts and accessories thereof	3,186	14,310	301,753	11,124
'33	Essential oils and resinoids; perfumery, cosmetic or toilet preparations	3,180	49,653	782,920	46,473

'90	Optical, photographic, cinematographic, measuring, checking, precision, medical or surgical ...	2,151	1,113,188	864,645	1,111,037

Source: Working is based on UNCTAD/ITC trade map data. **Note:** Sign " ---" in the last column indicates that Afghanistan's imports of particular product from the world are short of Turkey's exports to Afghanistan, meaning by there is as such no additional demand for that particular product group; this has probably emerged because of the fact that few data is still under updation process and more entries will be made at the later stage. Such entries are very few and for Afghanistan dataset only. NR: Not required.

2. Iran

The details, based on trade statistics for 2018, are given as under:

Total Imports of Iran	USD 41,236 Million
Exports of Turkey to World	USD 167,924 Million
Exports of Turkey to Iran	USD 2,393 Million

Conclusion

The upshot of the data reported in the foregoing section is that there is a projected potential for exports of Turkey to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to other four existing parties (Afghanistan, Iran, Pakistan and Tajikistan) will increase manifold from US\$ 3.17 billion and all member states USD 7.14 billion in 2018 out of its total exports of US\$ 168 billion. It merits mentioning that the indicative potential of exports of Turkey with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Turkey like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.9 Turkmenistan

Before analyzing Turkmenistan's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-186: Turkmenistan's Composition³⁸ of Exports in 2018: Top Twenty Product Groups

ANALYSIS OF TURKMENISTAN 'S TRADE WITH THE ECOTA CONTRACTING PARTIES

8. Afghanistan

The details, based on trade statistics for 2018, are as follows:

Total Imports of Afghanistan	USD 14,813 Million
Exports of Turkmenistan to World	USD 10,251 Million
Exports of Turkmenistan to Afghanistan	USD 771 Million

The product-wise detail of top twenty items is given as follows:

Table-191: Turkmenistan's Trade with Afghanistan

All values USD 000					
HS Code	Products which Turkmenistan's export to Afghanistan	Turkmenistan's exports to Afghanistan	Afghanistan's imports from world	Turkmenistan's exports to world	Indicative ⁴⁰ Potential for Turkmenistan's exports to Afghanistan
'TOTAL	All products	770,834	14,813,181	10,251,092	NR
'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	616,253	1,939,351	9,379,762	1,323,098
'31	Fertilisers	62,898	235,215	121,551	172,317
'90	Optical, photographic, cinematographic, measuring, checking, precision, medical or surgical ...	58,807	1,113,188	60,544	1,054,381
'04	Dairy produce; birds' eggs; natural honey; edible products of animal origin, not elsewhere ...	7,537	223,920	7,540	216,383
'68	Articles of stone, plaster, cement, asbestos, mica or similar materials	6,355	661,335	6,466	654,980
'15	Animal or vegetable fats and oils and their cleavage products; prepared edible fats; animal ...	6,225	829,831	12,377	823,606

⁴⁰**Indicative potential** for Turkmenistan's exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Turkmenistan (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Turkmenistan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Turkmenistan will engage in trade with ECOTA existing Member States and these countries will wholly import from Turkmenistan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Turkmenistan's exports to the world (column 6), with each of the other five Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

9. Uzbekistan

Available data, based on trade statistics for 2018, are as under:

Total Imports of Uzbekistan	<i>USD 17,209 Million</i>
Exports of Turkmenistan to World	<i>USD 10,251 Million</i>
Exports of Turkmenistan to Uzbekistan	Currently not available

Details not available as data reported for both countries is mirror data. Hence, the product-wise details of top twenty items also not available.

Conclusion

The upshot of the data reported in the foregoing sections and brief analysis is that there is a projected potential for exports of Turkmenistan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to five existing parties (Afghanistan, Iran, Pakistan, Tajikistan and Turkey) will increase manifold from US\$ 1,106 million and USD 1,229 million (to all ECO member states) in 2018 out of its total exports of US\$ 10,251 million. It merits mentioning that the indicative potential of exports of Turkmenistan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Turkmenistan like other countries, depends upon many factors such as enhanced national capacities, changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

5.10 The Republic of Uzbekistan

Before analyzing Uzbekistan's potential to export to ECO region, it is imperative to have a brief look at the structure of trade aggregates, such as exports, imports and composition thereof. Information about their partners/ destinations/ markets may also be useful. In view of this, basic information about trade of the country is given as under:

Table-199: Composition⁴¹ of Exports in 2018: Top Twenty Product Groups

⁴⁴**Indicative potential** for Uzbekistan exports has been worked out here and in the subsequent Tables by deducing the current level of exports of Uzbekistan (2018) from other country's imports of particular product (Column 4- Column 3= Column 6) implying that Uzbekistan can export to other countries which they are currently importing from the rest of the world. Further analysis is made under the assumption that Uzbekistan will engage in trade with ECOTA existing Member States and these countries will wholly import from Uzbekistan which may seem restrictive. Furthermore, **indicative potential has been computed for top twenty products of Uzbekistan's exports to the world (column 4), with each of the other four Member States which have so far signed and ratified the ECO Trade Agreement (ECOTA).** The same analysis has also been carried out for the rest of the five ECO member states prospective members, which may join ECOTA at any stage in future. **Taking into account capacity constraints, Indicative potential for each product group can be capped up to the maximum of the current exports reported in Column 5.**

9. Turkmenistan

Available data, based on trade statistics for 2018, are as under:

Total Imports of Turkmenistan	<i>USD 2,787 Million</i>
Exports of Uzbekistan to World	<i>USD 9,669 Million</i>
Exports Uzbekistan to Turkmenistan	Currently not available.

Details not available as data reported for both countries is mirror data. Hence, the product-wise details of top twenty items also not available.

Conclusion

The upshot of the data reported in the foregoing sections and brief analysis is that there is a projected potential for exports of Uzbekistan to each of the ECOTA countries as well as the prospective members of ECOTA. When ECOTA is operationalised, its exports to five existing parties (Afghanistan, Iran, Pakistan, Tajikistan and Turkey) will increase manifold from US 2,079 million and all member states US\$ 3,137 million in 2018 out of its total exports of US\$ 9,669 million. It merits mentioning that the indicative potential of exports of the Uzbekistan with other countries may seem bloated; nevertheless, it can be enhanced many times or at least can be doubled from the realistic perspective. With such trade regimes such as in ASEAN, member countries have significantly increased exports with other peer member countries.

Nevertheless, this analysis has certain limitations as utilization of indicative potential for Uzbekistan like other countries, depends upon many factors such as enhanced national capacities,

changes in the government policies, improved institutional structure, infrastructure development, utilization of technology, human and natural resources, attracting investments, etc. Furthermore, its potential for exports will also be fully realized when other member states, which are so far not party to ECOTA, join it and get the enhanced market access.

Appendices

Appendix-1: Note on Data and Data Sources

Data reported in the document uses direct data gathered from multiple national and international sources (list A) and published by ITC which is jointly mandated by WTO and UNCTAD. Over 95 percent data employed in this document is direct data, provided mostly by the national relevant statistical, customs and Trade institution. However, when data in some cases for 2018 or previous year (s), or some member states such as Turkmenistan and Uzbekistan for some years were not currently available with UNCTAD/ITC, it has been reported by trade partners (mirror data) and published by the ITC and reproduced here as with reference of ITC. Precisely, aggregated and disaggregated data on exports and imports (major twenty sectors) and trade partners for **Turkmenistan and the Republic of Uzbekistan** for 2018 is mirror data; presumably current data is under compilation. In short, the aggregated data for 2018 is mixed data containing direct as well as mirror data. Mirror data has been reported in **italics**. For the sake of standardization, meaningful comparison and inter-temporal evaluation, same source has been employed in the discourse. Where the sources are different, it has been expressly mentioned.

Data from the World Bank has also been reported in Table for the sake of comparison. For all countries, except Afghanistan, there is little variation in data, which is generally acceptable. However, in case of Afghanistan there is large variation in exports and imports and for 2018 only, which is still under compilation. A query was submitted to the UNCTAD/ITC for its clarification. As a solution for standardization, aggregated data for the **Islamic Republic of Afghanistan** has been reported for 2018 where for all countries data 2018 are reported without significant variation. However, in case of disaggregated data for import potential from the ECO region, data for 2016 has been reported and analyzed and import potential has been estimated. It is imperative to highlight that for 2017, UNCTAD/ ITC has not reported aggregated and disaggregated data. In World Bank source aggregated data of trade aggregates for Afghanistan are available but not in the disaggregated form. Hence, disaggregated appraisal and calculations were based on UNCTAD/ITC data for 2016 and reported in the relevant sections. In Section 2, for appraisal of intra-regional trade, exports and imports data used for 2016 and 2018 and no major variation has been noted in percentage terms. It is worth mentioning that SESRIC data/OIC Stat for Afghanistan is close to ITC and UNCTAD data for 2018.

With regard to data, some more pointed are mentioned hereunder.

- I. It has been pointed out in the foot notes of Section 2 and 6 that indicative trade potential to export to other countries, from realistic perspective, may be capped to the exports of the member state in the year, 2018, presented in the second last column, when trade potential exceeds from the export capacity of the country. The basis of working has been mentioned in foot note of the sections.

- II. In the data tables of major sectors of member states, minor values, less than one million USD in case of Turkey and bigger economies and below thousand USD in other countries case at HS code at 4 have not been reported.
- III. While calculating real GDP of member states for 2014-2018, data on all members was available for the period, 2014-2018 except the **Islamic Republic of Iran** for which data for 2018 was not available in the World Bank. Iranian Ministry of Finance reported 4.9 percent decline in 2018, hence was used for estimation of real GDP of Iran for 2018 and combined GDP of the region was worked out accordingly.
- IV. Throughout this document, Cumulative annual growth rate (CAGR) has been used and thus average growth rate (AGR) has been calculated over the period by using formulae = $[(Y_n/Y_o)^{1/n}-1]*100$, where Y_n : Last year value, Y_o : First year value, n : number of Years. This method to calculate average growth rate for the variables/economic indicators.
- V. Some Country Reports of the World Bank Group, International Monetary Fund (IMF), websites of ASEAN and SAARC etc have been consulted to avoid any major variation in reporting the value of economic indicators /statistics and make report accurate and reliable to the extent possible.

Appendix-2: Data Sources

The **International Trade Centre (ITC)** (French: *Centre du commerce international (CCI)*) is a multilateral agency which has a joint mandate with the World Trade Organization (WTO) and the United Nations (UN) through the United Nations Conference on Trade and Development (UNCTAD).

ITC collects and reports data for all countries and territories from the following sources:

Countries and Territories	Sources
Afghanistan	<u>UN COMTRADE</u> , <u>Afghanistan Chamber Of Commerce & Industries (ACCI)</u> , <u>UN COMTRADE</u>
Azerbaijan	<u>UN COMTRADE</u>
Iran, Islamic Republic of	<u>The Islamic Republic of Iran Customs Administration (IRICA)</u> , <u>UN COMTRADE</u>
Kazakhstan	<u>Eurasian Economic Commission</u> , <u>UN COMTRADE</u>
Kyrgyzstan	<u>UN COMTRADE</u> , <u>Eurasian Economic Commission</u> , <u>UN COMTRADE</u> <u>Eurasian Economic Commission</u> , <u>UN COMTRADE</u>
Pakistan	<u>UN COMTRADE</u>
Tajikistan	<u>Ministry Of Economic Development and Trade - Republic Of Tajikistan</u> <u>UN COMTRADE</u>
Turkey	<u>Turkish Statistical Institute (TURKSTAT)</u> , <u>UN COMTRADE</u>
Turkmenistan	UN COMTRADE, Mirror Data
Uzbekistan	<u>UN COMTRADE</u> , Mirror Data

- Also, World bank data and data from SESRIC

Appendix-3: World bank Data on Exports and Imports of the Member State, 2014-2018

Country Code	Series Name	2014 [YR2014]	2015 [YR2015]	2016 [YR2016]	2017 [YR2017]	2018 [YR2018]

Appendix-4: Some details of the Major Trade Blocs/Intergovernmental Organizations

Acronym	Full Form	Current Member Countries	Number	Region Covered
APEC	Asia-Pacific Economic Cooperation	United States; Australia; Brunei Darussalam; Canada; Chile; China; Hong Kong, China; Indonesia; Japan; Malaysia; Mexico; New Zealand; Papua New Guinea; Peru; The Philippines; Russia; Singapore; Republic of Korea; Chinese Taipei; Thailand; and Viet Nam	21	Asia-Pacific
APTA	Asia-Pacific Trade Agreement	Bangladesh, China, India, Lao PDR, Mongolia, Republic of Korea, and Sri Lanka	7	Asia-Pacific region
ASEAN	Association of Southeast Asian Nations	Brunei Darussalam, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand, and Vietnam	10	South East Asia
CAR	Central Asian Republics	Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan	5	Central Asia
CARICOM	Caribbean Community			Central America
COMESA	Common Market for Eastern and Southern Africa	Burundi, the Comoros, the Democratic Republic of Congo, Djibouti, Egypt, Eritrea, Ethiopia, Kenya, Libya, Madagascar, Malawi, Mauritius, Rwanda, Sudan, Swaziland, Seychelles, Uganda, Zambia and Zimbabwe	19	Eastern and Southern Africa
D-8	Developing 8 economies	Bangladesh, Egypt, Nigeria, Indonesia, Iran, Malaysia, Pakistan, and Turkey	8	North Africa, Western Asia, South Asia, South East Asia
EU	European Union	Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Ireland, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Spain, Slovakia, Slovenia, Sweden and the United Kingdom (UK)	28	Europe
G7	Group of Seven	Canada, France, Germany, Italy, Japan, United Kingdom, and United States	7	Most Advanced economies
GCC	Gulf Cooperation Council	Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates	6	Alliance of middle east/Arab States of the Persian Gulf except Iraq.
MERCOSUR	South American Trade bloc	Argentina, Brazil, Paraguay, and Uruguay	4	South American
NAFTA	North American Free Trade Agreement	Canada, Mexico and United States	3	North America
OECD	Organization for Economic	North and South America to Europe and Asia-Pacific countries.....	36	Universal coverage of

Acronym	Full Form	Current Member Countries	Number	Region Covered
	Cooperation and Development			advanced economies spanning the globe
OPEC	Organization of the Petroleum Exporting Countries	Algeria, Angola, Ecuador, Equatorial Guinea, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, the Republic of the Congo, Saudi Arabia, United Arab Emirates, and Venezuela	15	African, Asian and Latin American Nations
SAARC	South Asian Association for Regional Cooperation	Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan and Sri Lanka.	8	South Asia
SACU	Southern African Customs Union	Botswana, Lesotho, Namibia, South Africa, and Swaziland	5	Southern Africa
Turkic Council	Cooperation Council of Turkic-Speaking States	Azerbaijan, Kazakhstan, Kyrgyzstan, Turkey and Uzbekistan	5	Europe and Central Asia

Source: Information was extracted from the Organization's websites.

Appendix-5: Synopsis of Major Sectors of the Member States' Economies

(a) Major Exports of the Contracting Parties to ECOTA

S. No.	Contracting Party	Total Exports and Exports of Major Sectors with Codes		Value in 000, USD in 2018	Percentage Share in Exports	
1.	The Islamic Republic of Afghanistan	'TOTAL	All products	1,769,009	100.00	
		'08	Edible fruit and nuts; peel of citrus fruit or melons	800,089	45.23	
		'13	Lac; gums, resins and other vegetable saps and extracts	214,094	12.10	
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	178,780	10.11	
		Total of major three exports groups : Mainly Agricultural and mineral products				67.44
		'07	Edible vegetables and certain roots and tubers	177,646	10.04	
		'09	Coffee, tea, maté and spices	88,133	4.98	
		Total of major five exports groups : Mainly Agricultural and mineral products				82.46
2.	The Islamic Republic of Iran	'TOTAL	All products	96,617,521	100	
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	66,366,802	68.69	
		'39	Plastics and articles thereof	5,551,469	5.75	
		'29	Organic chemicals	4,105,898	4.25	
		Total of major three exports groups: Mainly mineral, Petro-chemical industries				78.69
		'72	Iron and steel	3,905,528	4.04	
		'08	Edible fruit and nuts; peel of citrus fruit or melons	1,718,813	1.78	
		Total of major five exports groups: Mainly Mineral fuels, Petro-chemical industries, steel and agriculture				84.51
3.	The Islamic Republic of Pakistan	'TOTAL	All products	23,630,893	100	
		'63	Other made-up textile articles; sets; worn clothing and worn textile articles; rags	4,051,510	17.14	
		'52	Cotton	3,498,997	14.81	
		'61	Articles of apparel and clothing accessories, knitted or crocheted	2,860,768	12.11	
		Total of major three exports groups: Textile and cotton based textile				44.06

S. No.	Contracting Party	Total Exports and Exports of Major Sectors with Codes		Value in 000, USD in 2018	Percentage Share in Exports
		'62	Articles of apparel and clothing accessories, not knitted or crocheted	2,583,733	10.93
		'10	Cereals	2,325,637	9.84
		Total of major five exports groups: Cotton based textile and agriculture			64.83
4.	The Republic of Tajikistan	'TOTAL	All products	1,073,858	100
		'26	Ores, slag and ash	400,127	37.26
		'52	Cotton	204,928	19.08
		'76	Aluminum and articles thereof	202,178	18.83
		Total of major three exports groups: Mineral and Agriculture Sectors			75.17
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	79,107	7.37
		'25	Salt; sulphur; earths and stone; plastering materials, lime and cement	65,679	6.12
		Total of major five exports groups: Mineral and Agriculture Sectors			88.66
5.	The Republic of Turkey	'TOTAL	All products	167,923,862	100
		'87	Vehicles other than railway or tramway rolling stock, and parts and accessories thereof	26,758,524	15.93
		'84	Machinery, mechanical appliances, nuclear reactors, boilers; parts thereof	15,827,680	9.43
		'72	Iron and steel	11,546,435	6.88
		Total of first three Sectors: Major Transport, Machinery, Metals products			32.24
		'61	Articles of apparel and clothing accessories, knitted or crocheted	9,043,113	5.39
		'85	Electrical machinery and equipment and parts thereof; sound recorders and reproducers, television ...	8,722,854	5.19
		Total of major five exports groups: Transport, Machinery, Mineral and Textile apparel Sectors			42.82

(b) Major Exports of other ECO Member States

S. No.	Member States	Total Exports and Exports of Major Sectors with Codes		Value in 000, USD in 2018	Percentage Share in Exports	
6.	The Republic of Azerbaijan	'TOTAL	All products	19,458,633	100	
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	17,874,615	91.86	
		'08	Edible fruit and nuts; peel of citrus fruit or melons	326,314	1.68	
		'07	Edible vegetables and certain roots and tubers	233,314	1.2	
		Total of major three exports groups : Mainly mineral and agricultural products				94.74
		'71	Natural or cultured pearls, precious or semi-precious stones, precious metals, metals clad ...	119,244	0.61	
		'39	Plastics and articles thereof	118,593	0.61	
		Total of major five exports groups : Mainly mineral and petrochemical and agricultural				95.96
7.	The Republic of Kazakhstan	'TOTAL	All products	60,956,233	100	
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	42,737,941	70.11	
		'72	Iron and steel	4,160,440	6.83	
		'74	Copper and articles thereof	2,548,987	4.18	
		Total of major three exports groups: Mainly mineral/fossil fuel, Petro-chemical, metal industries				81.12
		'28	Inorganic chemicals; organic or inorganic compounds of precious metals, of rare-earth metals, ...	2,135,200	3.5	
		'26	Ores, slag and ash	2,087,239	3.42	
		Total of major five exports groups: Mainly mineral/fossil fuel, Petro-chemical, metal industries				88.04
8.	The Kyrgyz Republic	'TOTAL	All products	1,690,340	100	
		'71	Natural or cultured pearls, precious or semi-precious stones, precious metals, metals clad ...	679,807	40.22	
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	139,264	8.24	
		'61	Articles of apparel and clothing accessories, knitted or crocheted	137,217	8.12	
		Total of major three exports groups:				56.58

S. No.	Member States	Total Exports and Exports of Major Sectors with Codes		Value in 000, USD in 2018	Percentage Share in Exports
		Stone/glass, minerals, manufacturing and agriculture			
		'26	Ores, slag and ash	124,566	7.37
		'07	Edible vegetables and certain roots and tubers	61,929	3.66
		Total of major five exports ; Stone/glass, minerals, manufacturing and agriculture			67.61
9.	Turkmenistan	'TOTAL	All products	10,251,092	100
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	9,379,762	91.29
		'52	Cotton	309,467	2.95
		'31	Fertilizers	121,551	1.16
		Total of major three exports groups: Mineral, petro-chemical and agriculture/textile products			95.4
		'25	Salt; sulphur; earths and stone; plastering materials, lime and cement	75,878	0.88
		'39	Plastics and articles thereof	68,593	0.72
		Total of major five exports groups: Mineral, petro-chemical and agriculture/textile products			97
10.	The Republic of Uzbekistan	'TOTAL	All products	9,669,340	100
		'71	Natural or cultured pearls, precious or semi-precious stones, precious metals, metals clad ...	2,600,699	26.9
		'27	Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral ...	1,698,460	17.57
		'52	Cotton	967,003	10
		Total of first three Sectors: Major stone/glass, minerals, agriculture/textile			
		'74	Copper and articles thereof	585,048	6.05
		'08	Edible fruit and nuts; peel of citrus fruit or melons	542,948	5.62
		Total of major five exports groups Major stone/glass, minerals, agriculture/textile
