

**ECONOMIC COOPERATION ORGANIZATION  
(ECO)  
TRAINING COURSE**

The National Cartographic Center of Iran with the support of ECO secretariat holds a training course on:

# **Application of Geospatial Data in Disaster Risk Reduction**

**16-17 December 2024**

National Cartographic  
Center of IRAN

# The role of geospatial information sciences in climate change

Ramin Papi

Head of the National Geoportal Department  
National Cartographic Center of IRAN

# What is climate change ?

**Causes**  
**Effects**

# Causes

**Greenhouse  
Gas  
Emissions**

**Deforestation**

**Agricultural  
Practices**

# Effects

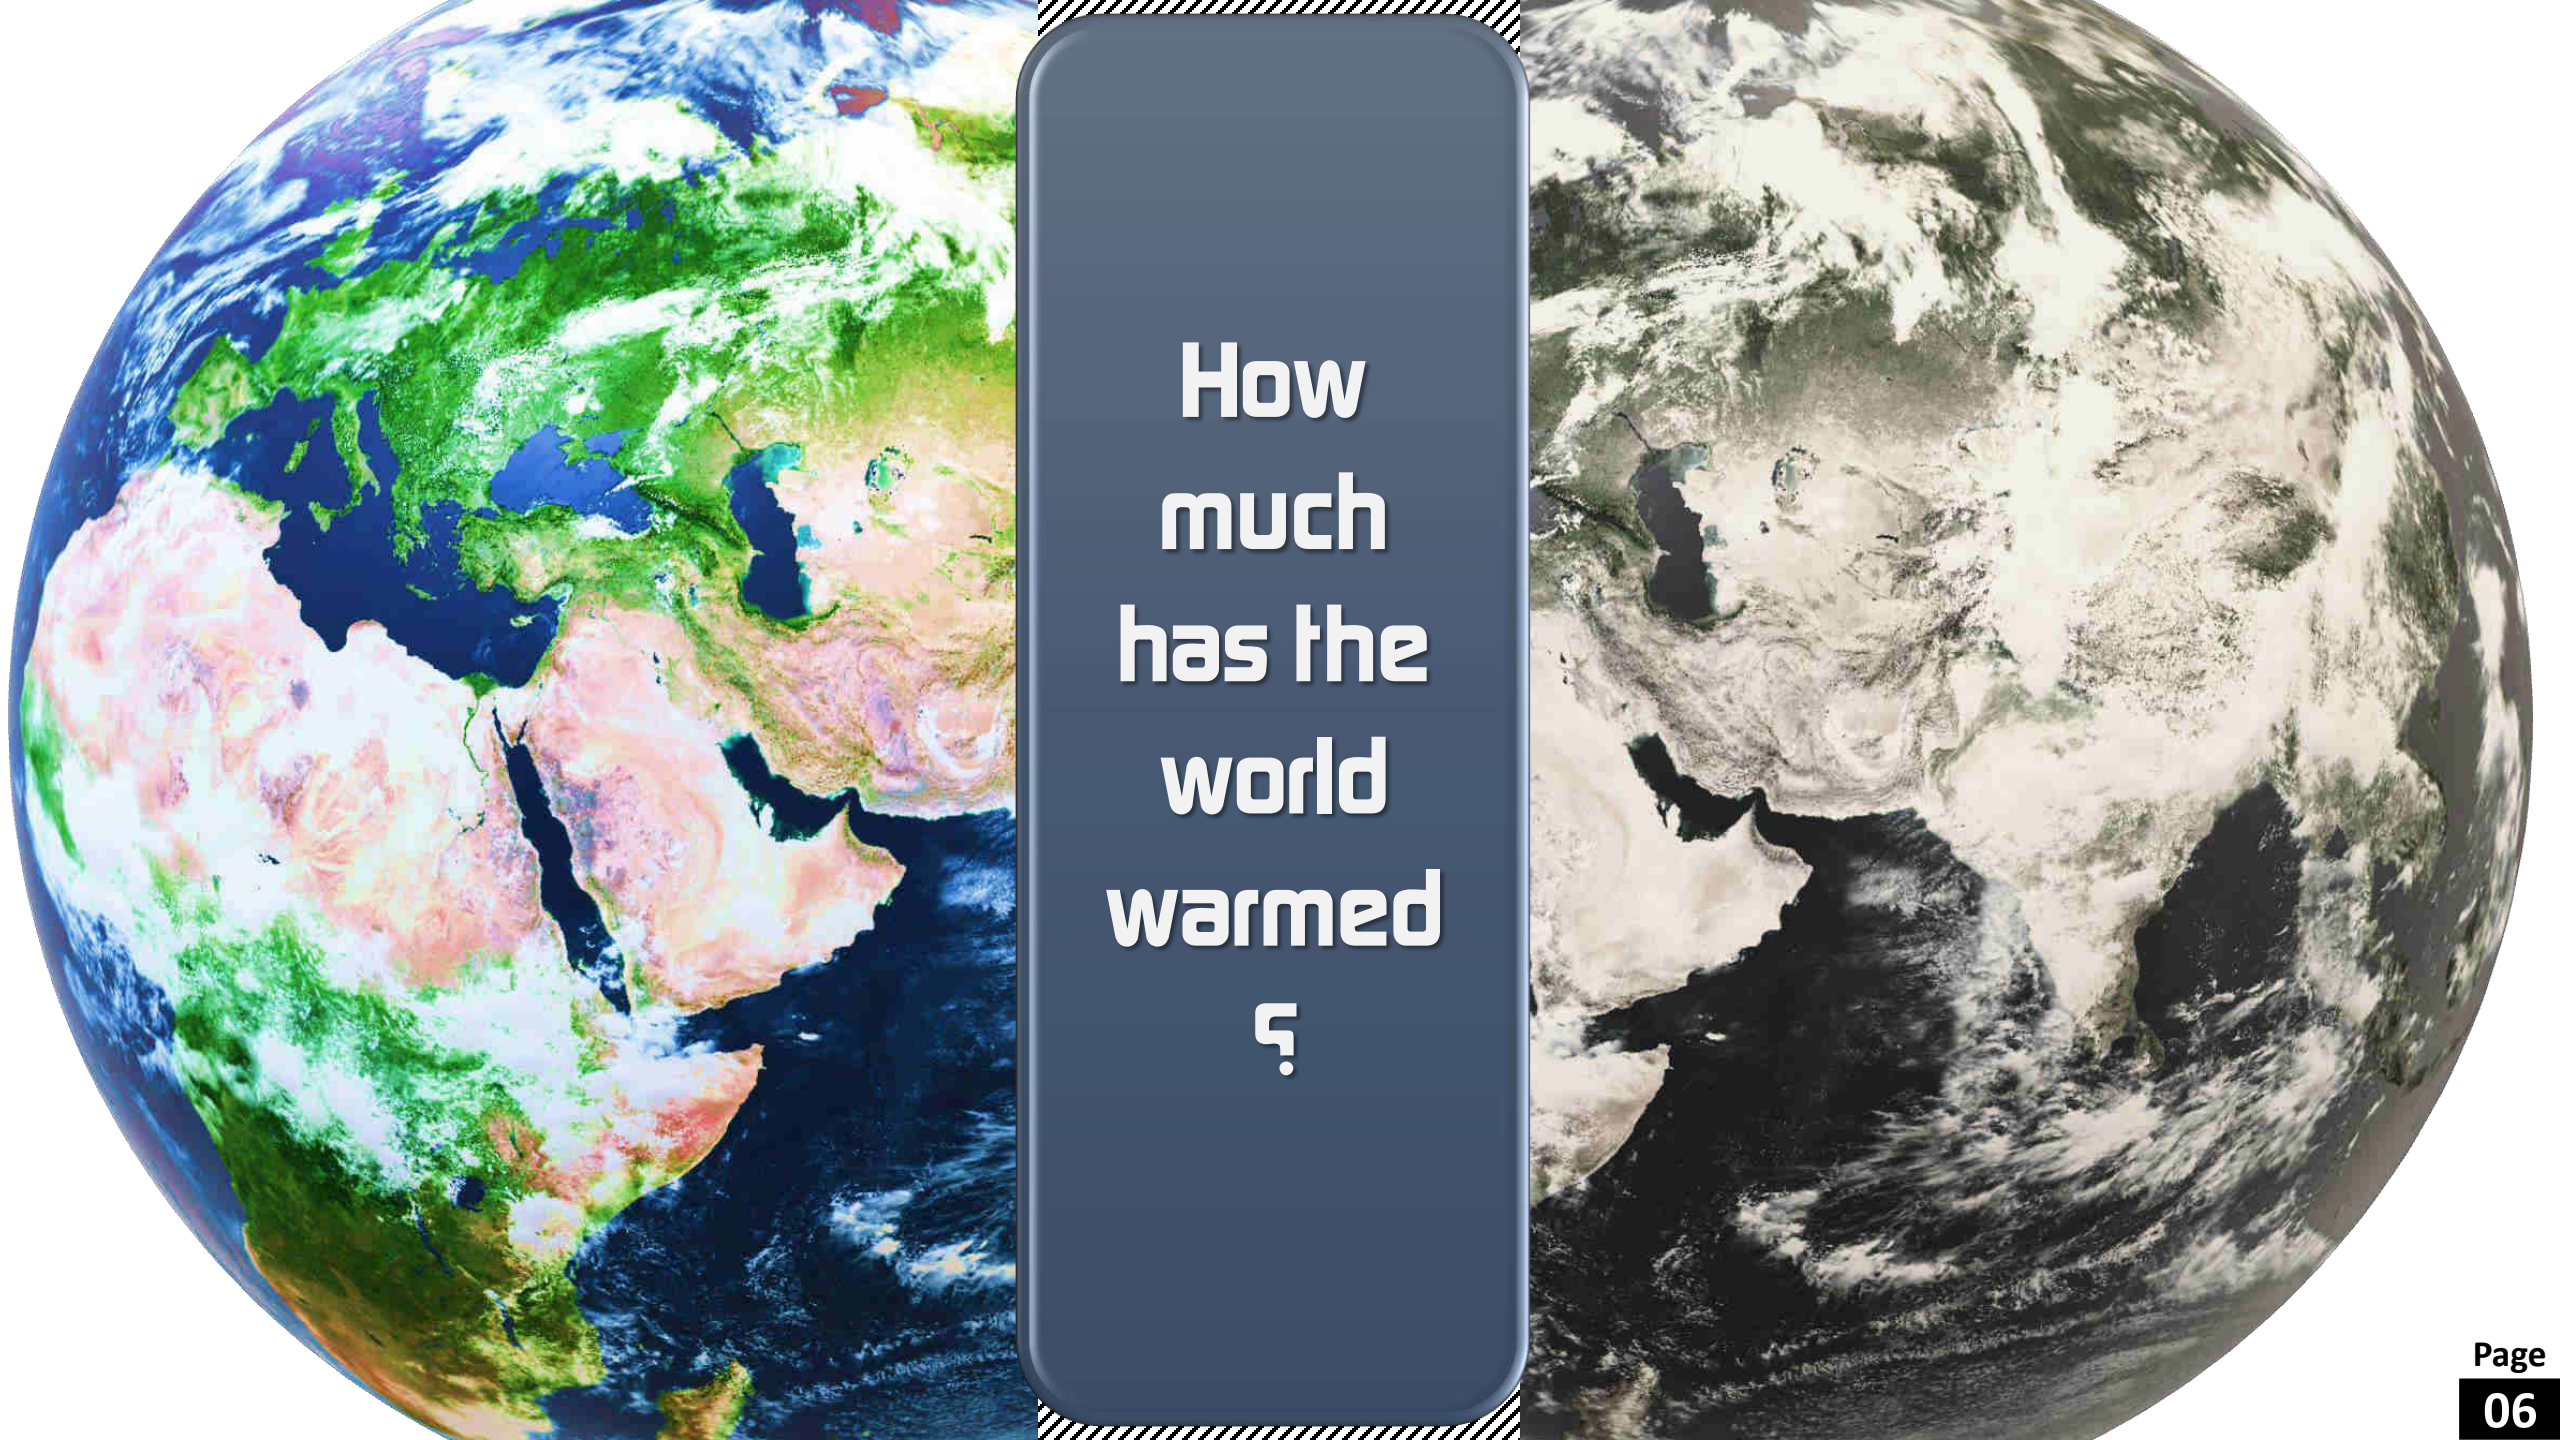

**Rising  
Temperatures**

**Sea Level Rise**

**Ecosystem  
Disruption**

**Melting Ice  
Caps and  
Glaciers**

**Extreme  
Weather  
Events**

How  
much  
has the  
world  
warmed  
?

# Warming

**Temperature  
Increase**

**Projected  
Future  
Warming**

**Monitoring  
and Data**

**Regional  
Variations**

**Impacts of  
Warming**

The image is a vertical split showing two different states of Earth. The left side shows a vibrant, healthy planet with lush green vegetation, blue oceans, and white clouds. The right side shows a desiccated, grey, and cracked planet, representing a state of extreme climate change. A dark blue rounded rectangle is centered over the split, containing white text.

**What is  
the risk  
of  
climate  
change**

?

# RISK

**Environmental  
Risks**

**Economic  
Risks**

**Geopolitical  
Risks**

**Health Risks**

**Social Risks**

**Feedback  
Loop**

**Why is  
there little  
action to  
mitigation  
climate  
change**

?

# Challenges

**Political  
Challenges**

**Social and  
Cultural  
Factors**

**Inequities  
and Injustice**

**Economic  
Factors**

**Psychological  
Factors**

**Complexity of  
Solutions**

# What to Do ?

# Actions

**Individual  
Actions**

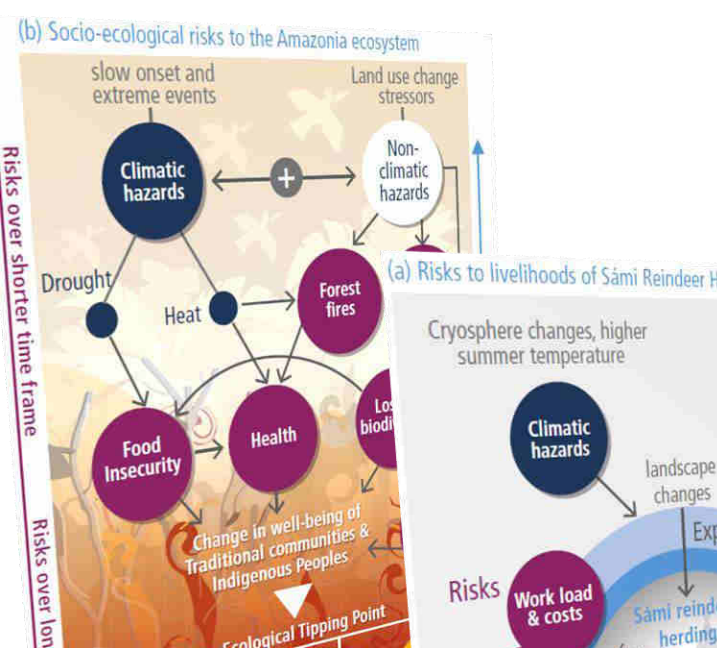

**Corporate  
Responsibility**

**Global  
Cooperation**

**Community  
Initiatives**

**Government  
Policies**

# Climate Change 2022 Mitigation of Climate Change

# IPCC Sessions

REMOTE SENSING

HYDROGRAPHY

Hydrographic surveying is the systematic measurement of the physical features of bodies of water and the land areas adjacent to those bodies of water.

Hydrography is the science that measures and describes the physical features of bodies of water and the land areas adjacent to those bodies of water.

Hydrography is the science that measures and describes the physical features of bodies of water and the land areas adjacent to those bodies of water.

HYDROGRAPHERS

- water levels & tides
- currents
- temperature

What products are made from hydrographic survey data?

essential maps for safe marine navigation

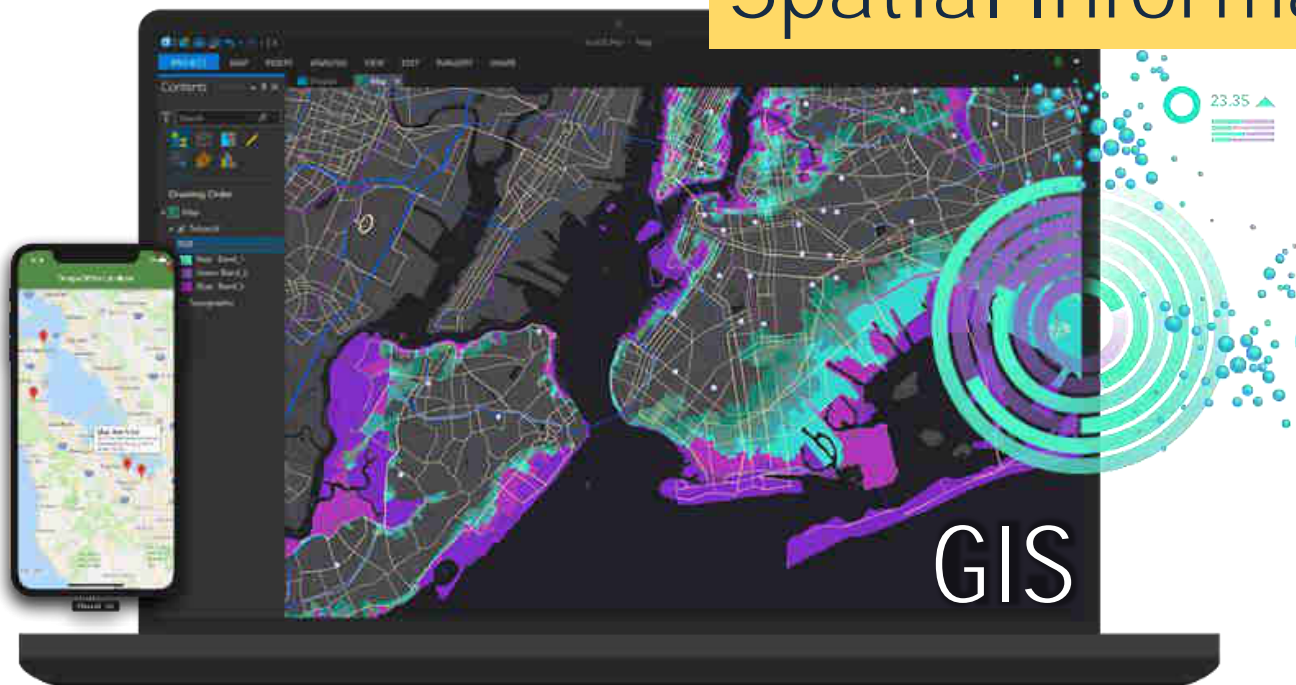

hydrographic survey baseline data for research and marine operational products and services

Surveying with multibeam echo sounders is the primary method of obtaining hydrographic data.

By mapping out water depth, the shape of the seabed and coastline, the location of possible obstructions, and physical features of water bodies, hydrography helps to keep our maritime transportation system moving safely and efficiently.
